1. Introduction

MTS

TM06 3406 0215

Fig. 1 MTS pump with cutaway

MTS pumps are screw pumps designed for pumping of cooling lubricants and cutting oils for machine tool applications.

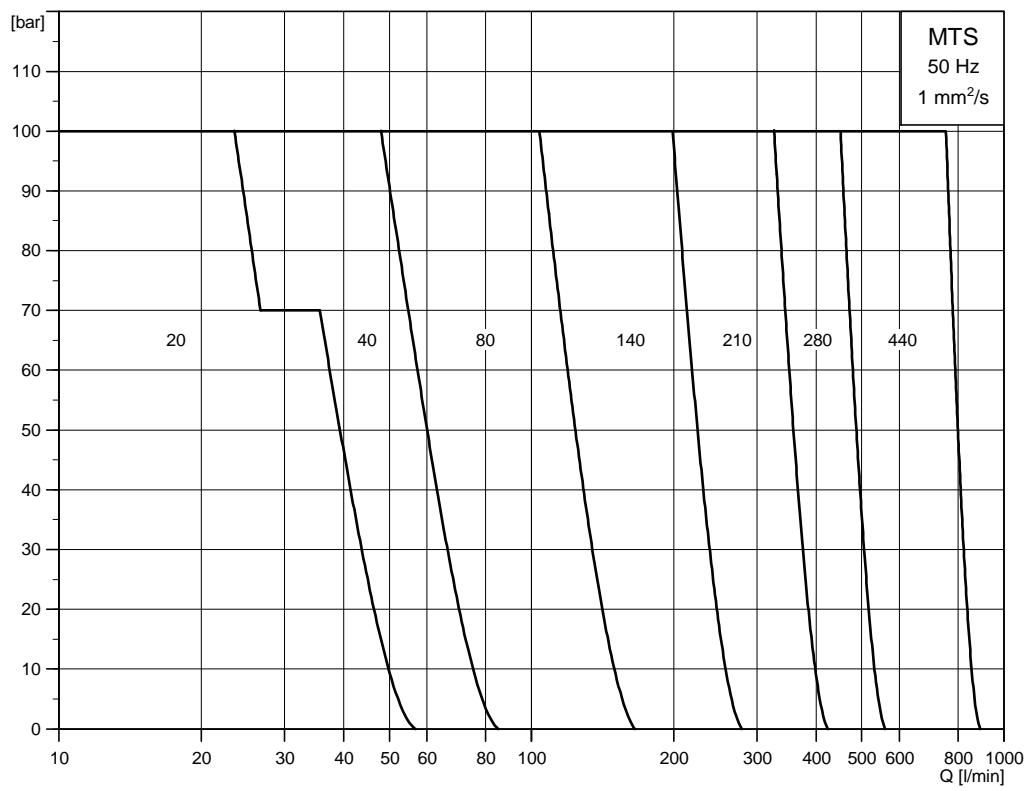

Depending on which pump you choose, the pump can be mounted on top of tanks with the pump immersed in the pumped liquid or the pump can be dry-installed with pipe connections to the tank, see page 13.

The pumps come in various sizes and screw pitches to provide the flow, pressure and length required.

The pumps consist of a motor and a pump unit.
The motor is a Grundfos standard MG or Siemens motor designed to EN standards.

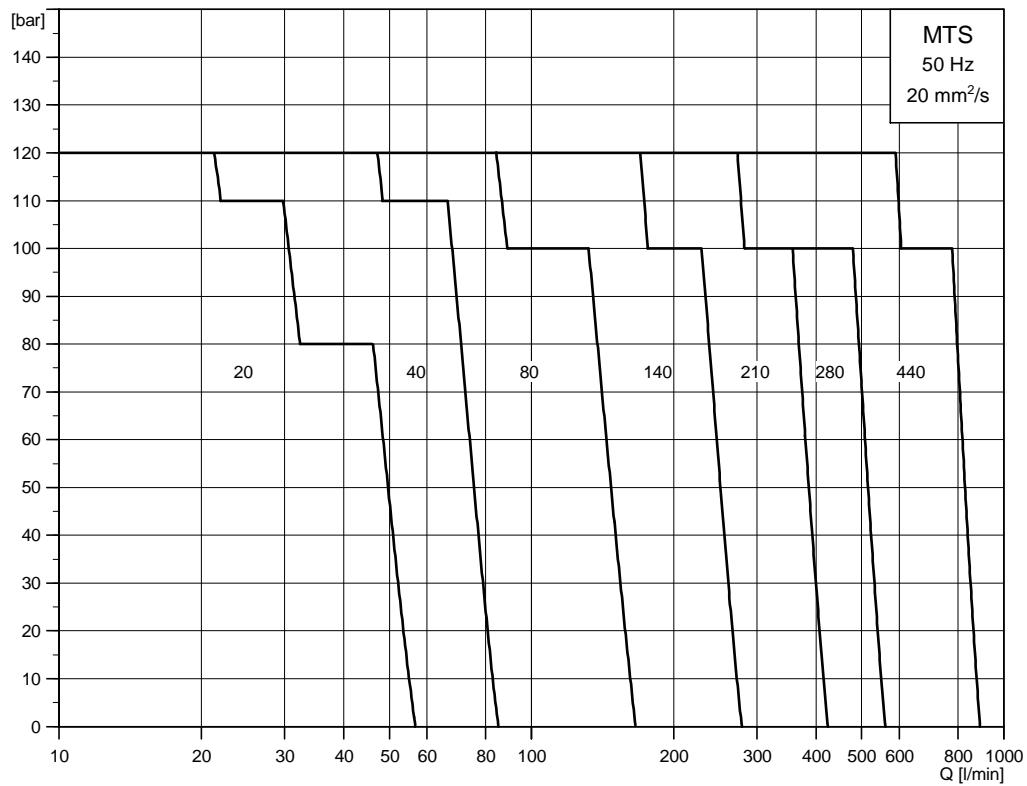

The pump unit consists of optimised hydraulics, various types of connections, a motor stool and various other parts.

2. General description

Main applications

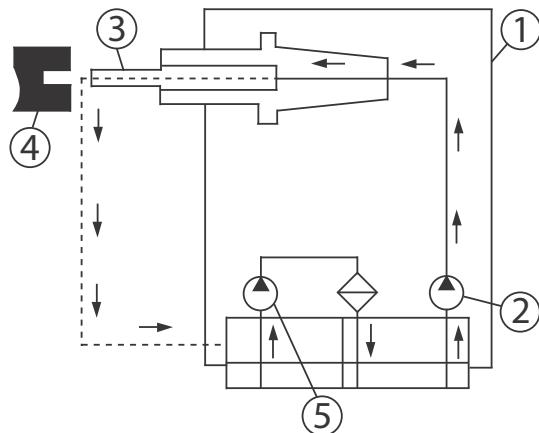

MTS pumps are an important part of modern metal machining centres, transfer lines and grinding and deep-hole drilling machines.

Application

Transfer of well, conditionally or poorly lubricating abrasive liquids in metal working or process engineering, such as cutting, grinding and deep-hole drilling oils, oil-in-water emulsions and cooling lubricant solutions. The pumped liquid must not attack the materials.

Permissible cooling lubricants:

- Solutions (inorganic substances in water; organic and synthetic substances in water)
- Emulsions (oil-in-water, oil content minimum 2 to 20 %)
- Cutting and grinding oils (without additives; with polar physically acting additives; with mildly acting, lubricating film forming additives; with polar and mildly acting additives; with active, chemical additives; with polar and active additives).

Q = Shaft seal ring/axial inlet, pipe thread as standard								
8.6 = Mechanical shaft seal/radial inlet, SAE as standard								
T = Pump for tank-top installation								
D = Pump for dry installation								
H = Pump for horizontal installation								

Construction

Three-screw, self-priming, flange-mounted pump (DIN ISO 3019-2) with special surface-hardened drive and idler screws. The idler screws are hydraulically driven, and the axial thrust is completely neutralised hydrostatically. The drive screw is fixed in position with external, permanently lubricated groove ball bearing. The large overall length with its many chambers results in little surface pressure, low pressure differences and thus reduced wear. The rotor housing has been optimised to ensure maximum resistance to wear. The material used is specially hardened grey cast iron (EN-GJL) that is part of a special safety concept. The housing surface in contact with the screws has a ceramic-like hardness. Additionally, unlike with other materials (such as SiC), wear, shocks, vibration or aeration cannot lead to sudden failure of the pump unit. Construction and materials result in little wear, good controllability and high efficiency.

Motor

The pumps are fitted with a totally enclosed, fan-cooled, 2-pole Grundfos standard MG or a Siemens motor with principal dimensions according to EN and IEC standards.

Electrical tolerances according to EN 60034.

Supply voltage, 60 Hz	3 x 200-230/346-400 V 3 x 208-230/460-480 V

On request, Grundfos MG motors are available with cURus approvals carried out by the Underwriters Laboratories Inc. according to the UL 1004 standard for electrical motors.

Motor protection

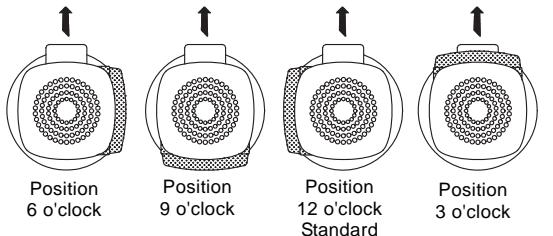

MG motors

Three-phase motors must be connected to a motor-protective circuit breaker in accordance with local regulations.

Three-phase Grundfos and Siemens motors from 3 kW and upwards have a built-in thermistor (PTC) according to DIN 44082 (IEC 34-11: TP 211).

Terminal box positions

As standard, the pumps have their terminal box mounted in position 12 o'clock of the pump; however, other positions are possible.

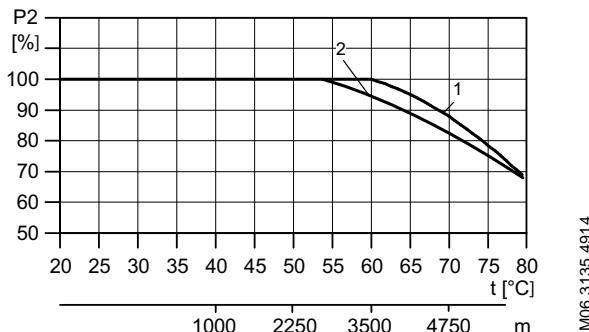

TM02 7777 4003

Fig. 7 Terminal box positions

Ambient temperature

MG motors (1.5 - 22 kW)	Max. 60 °C
Siemens motors (30-200 kW)	Max. 55 °C

If the ambient temperature exceeds above maximum values or if the motor is located 1000 metres above sea level, the motor output (P2) must be reduced due to the low density and consequently low cooling effect of the air. In such cases, it may be necessary to use a motor with a higher output.

TM06 3135 4914

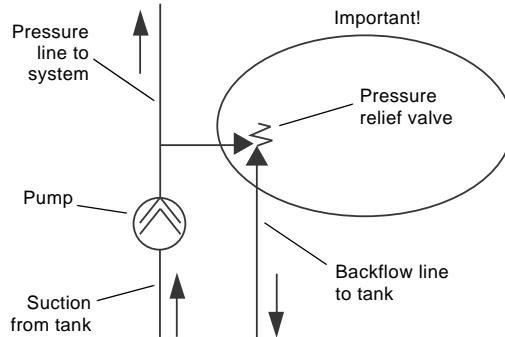

Fig. 8 Relationship between motor output (P2) and ambient temperature/altitude

Pos. Description

- | | |

| 1 | MG motors (1.5 - 22 kW) |
| 2 | Siemens motors (30-200 kW) |

Overload protection

The pump has no pressure-relief valve. Thus the overload protection must be provided in the control system or with a pressure-relief valve.

TM04 5259 4808

Fig. 9 Overload protection

Sound pressure level

MTS construction design allows gentle, even, virtually pulsation-free and low-noise pumping. The noise emission lies between 56 and 74 dBA and depends on speed, pump size and installation. MTS pumps operate significantly quieter than rotary lobe and centrifugal pumps with comparable performance.

Measuring conditions:

- Distance to the pump: 1 m
- Operation: Cavitation-free
- Motor: IEC standard motor
- Tolerance: ± 3 dB.

Size	Sound pressure level [dB]	
	2900 [rpm]	3500 [rpm]
20	56	58
40	59	61
80	61	63
140	64	66
210	67	69
280	69	71
440	72	74

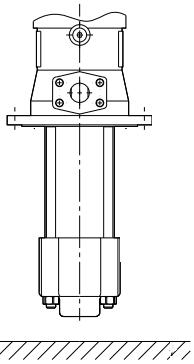

The data are reference values.

The actual airborne sound level depends especially on the installation conditions.

Shaft sealing/connections

Design DQ

Shaft sealing with shaft seal ring. Inlet pressure up to 1 bar. Axial inlet with pipe thread connection (DIN EN ISO 228-1). Radial high-pressure discharge flange according to SAE J518C. MTS 20 to 140 additionally with pipe thread connection (DIN EN ISO 228-1).

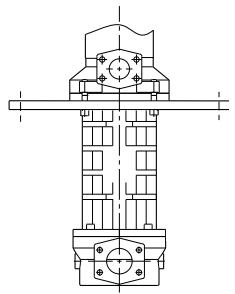

TM04 1988 1708

Fig. 10 Design DQ

Design D8.6

Shaft sealing with maintenance-free highly wear-resistant mechanical shaft seal according to EN 12756. Radial high-pressure inlet and discharge flanges according to SAEJ518C. Optionally, the pump is available with axial inlet connection with pipe thread (DIN ISO 228-1).

Pump designs

The pump designs available as standard and on request are shown in fig. 14.

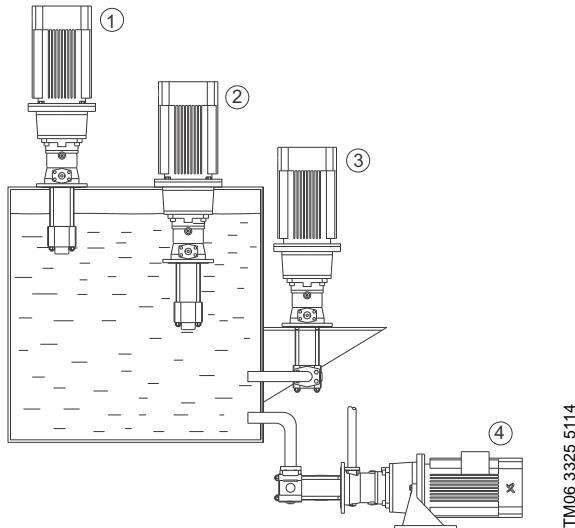

Fig. 14 Pumps designs

Pos. Description

- 1 Pump designed for tank-top installation
- 2 Pump designed for in-tank installation (on request)
- 3 Pump designed for dry installation with flange
- 4 Pump designed for dry installation with mounting foot

Pumps for tank-top installation

The pump is equipped with a flange for mounting on the tank top, and the discharge port is above the tank cover. This type of installation is easy and economic to install. The pump is equipped with a seal ring and is well-suited for operation with an inlet pressure up to 1 bar. See page 14 for installation requirements.

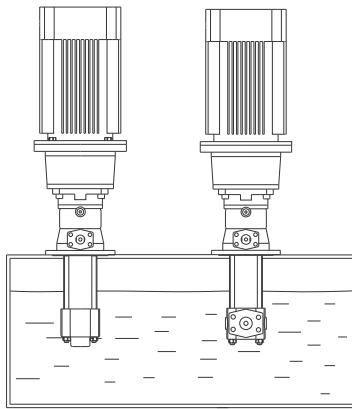

Fig. 15 Tank-top installation

In-tank installation

This type of installation saves space compared with pumps which are designed for dry installation. Any leakage remains in the tank. See page 14 for installation requirements.

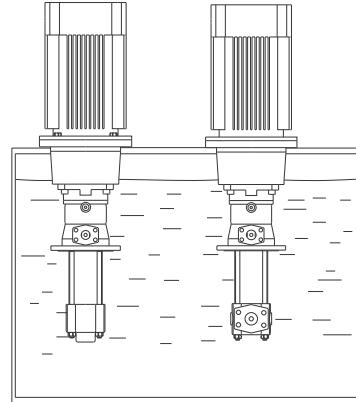

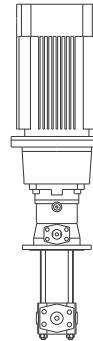

Fig. 16 In-tank installation

Pumps for dry installation

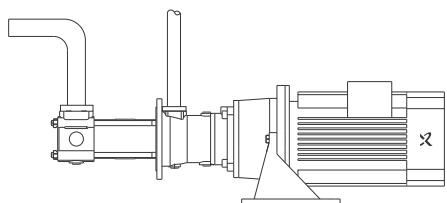

TM06 3349 5214

TM06 3350 5214

Fig. 17 Pump designed for dry installation with flange

This type of installation is well-suited for operation with an inlet pressure up to 10 bar and it is easy to access the pump. A silicon carbide mechanical shaft seal ensures a long service life.

Pumps for horizontal installation

TM06 3351 5214

Fig. 18 Pump designed for dry installation with horizontal mounting foot

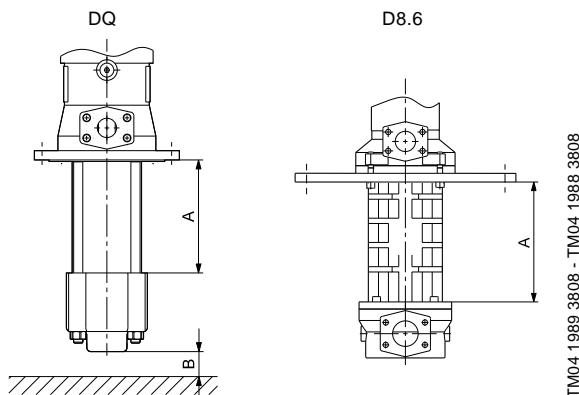

The pump is equipped with a mounting foot. This type of installation is well-suited for operation with an inlet pressure up to 10 bar and it is easy to access the pump. A silicon carbide mechanical shaft seal ensures a long service life.

Installation

The following applies for pumps installed in tanks.

In order to protect the pump at startup and to ensure correct performance, observe the requirements in the table below.

5. NPSH curves for MTS pumps

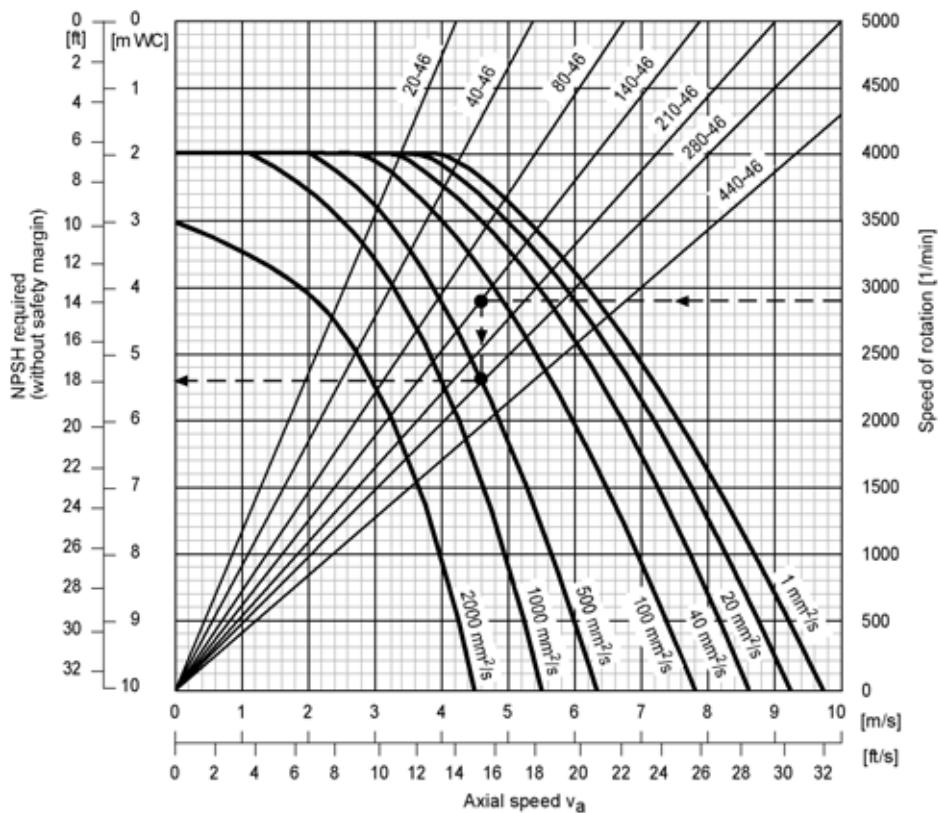

The performance curves refer to liquids without any air enclosed and show the beginning of aeration. For this reason, a safety margin of 0.5 m must be added to the NPSH value taken from the curve. For liquids with air inclusions (undissolved air), an additional value must be added to the NPSH value derived. When dealing with critical conditions in your plant, always consult Grundfos.

Maximum allowable air content

Emulsion: 10 %

Oil: 7 %.

Spindle pitch angle 46 degrees

TM04 4807 2109

Example

Given:

Size	140-46
Speed	$n = 2900 \text{ min}^{-1}$
Viscosity	$\nu = 500 \text{ mm}^2/\text{s}$

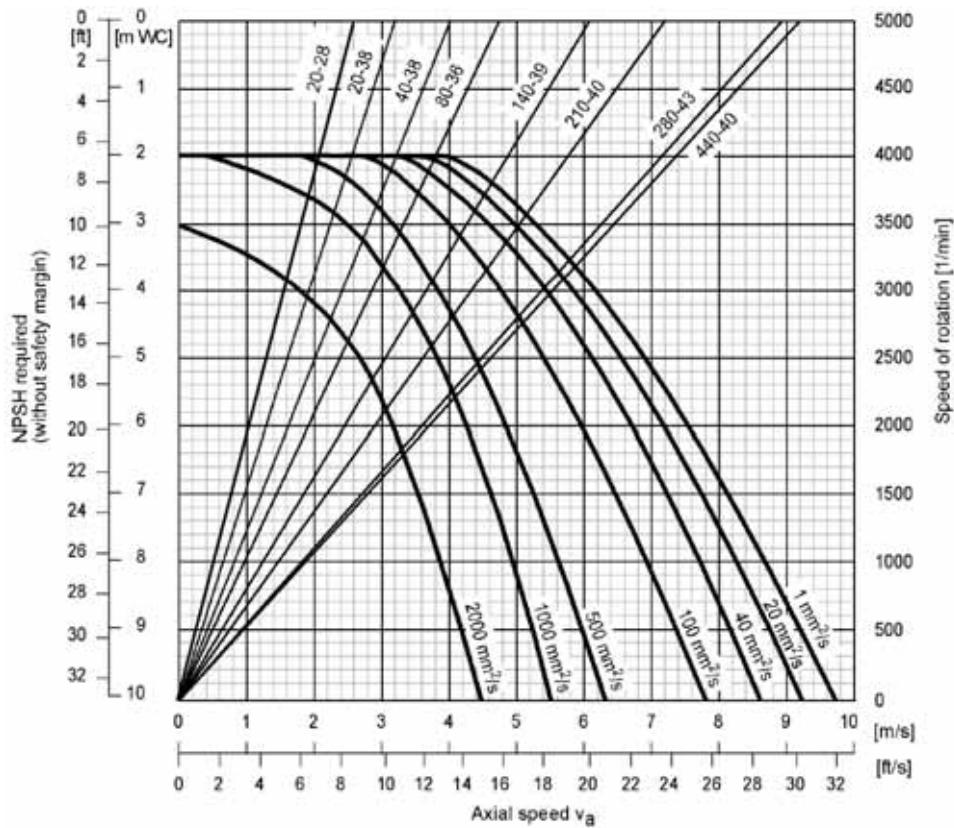

Wanted:

NPSH required.

Solution:

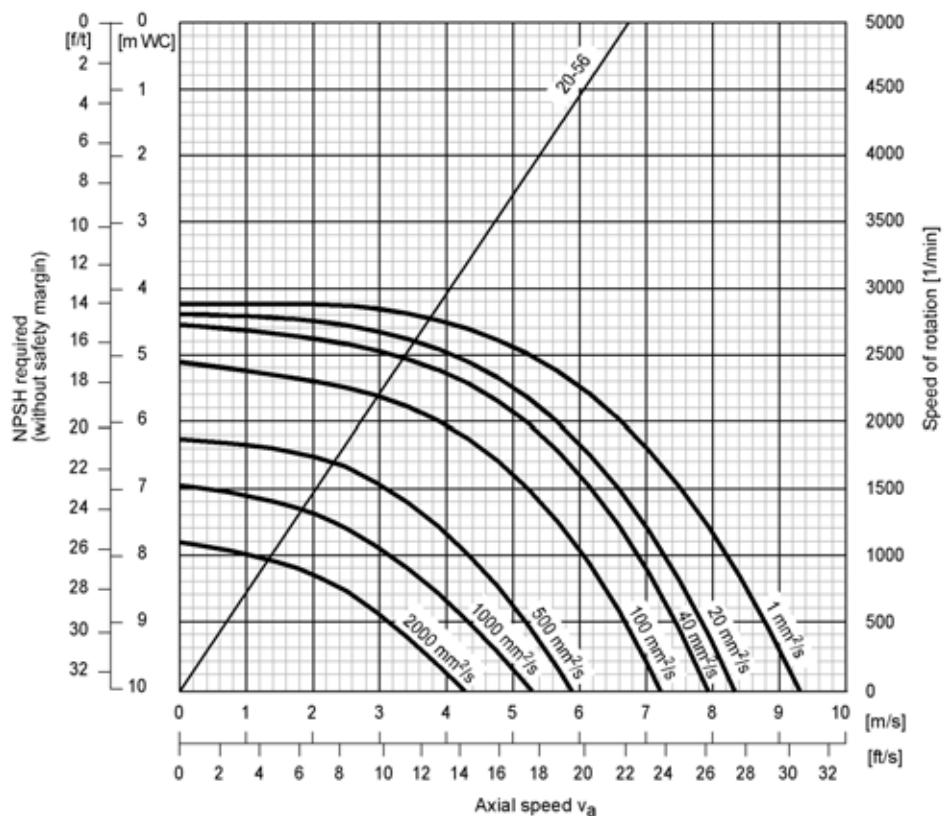

$$\begin{aligned} \text{NPSH taken from curve} &= 5.4 \text{ m H} \\ + \text{safety margin } 0.5 \text{ m} & \\ &= 5.9 \text{ m H.} \end{aligned}$$

Spindle pitch angle smaller than 46 degrees

TM06 3113 4814

Spindle pitch angle 56 degrees

TM04 4809 2109

6. Pumped liquids

List of pumped liquids

The composition, oil content (ability to provide lubrication) and cooling effect of the liquid determine the pump maintenance intervals and maximum permissible performance data.

Cooling lubricants according to DIN 51 385 are divided into three groups according to water and oil content. The pump also pumps cooling lubricants with a very low lubricating effect, but very high cooling performance.

Cooling lubricant main group	Subgroup	Effect at the processing spot
L Solutions	Solutions of inorganic materials in water	Higher cooling effect, lower lubricating effect
	Solutions, dispersions of organic (synthetic materials in water)	
E Emulsions S Petroleum-based cutting and grinding oils (natural and synthetic)	Oil-in-water emulsions (Oil content E 2 to E 20 %)	Cooling-lubricating effect
	Cutting oils without additives (pure)	Higher lubricating effect, lower cooling effect
	Cutting oils with polar (physically effective) additives	
	Cutting oils with mild-effect (lubricating film forming) EP additives	Better surface adhesion provides protection against corrosion
	Cutting oils with polar and mild-effect EP additives	
	Cutting oils with active (chemical) EP additives	Higher temperature and pressure resistance
	Cutting oils with polar and active EP additives	

Filtration

To reach an acceptable pump life, we recommend that you filtrate the cooling lubricants to following cleanliness classes according ISO 4406/99. The recommended cleanliness class depends on pumping pressure and abrasive class 1 to 7. There are process examples for abrasive classes given below the table.

The additional specifications to filter mesh and mass proportion are guide values for orientation. The decisive factor is the cleanliness of the liquid indicated by the cleanliness class. To avoid damage by coarse particles, we recommend that you use a filter mesh of 65 µm (nominal, two dimensional) and finer.

	Abrasive class						
	1	2	3	4	5	6	7
Material	steel, GG, Al	steel, GG, Al	Al (Si > 5 %)	steel	steel, hard.	hard metal	titanium

8. System solutions

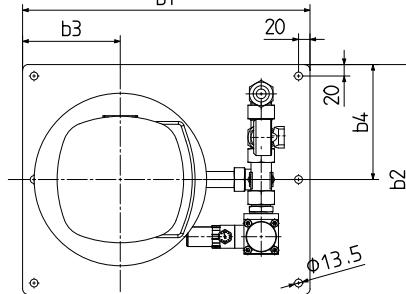

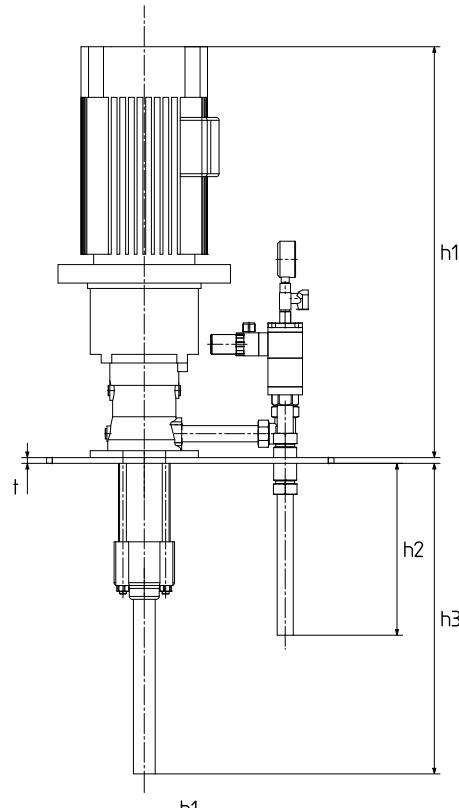

MTS pump system

Assembled MTS pump system with MTS screw pump, mounting plate, pressure relief valve and piping.

TM05 4422 2312

Dimensional sketches

TM05 4423 2212

Features and benefits

Fully integrated all-in-one system

All components, including valves, are preassembled to customer specifications.

Pump design

The pumps are screw pumps designed for pumping cooling lubricants and cutting oils for machine tool applications.

Long lifetime

Highly wear resistant, PVD coated spindles and special, hardened rotor housing extend the lifetime.

High-efficiency motor

IE2 motors are standard, and IE3 motors are optional.

Economical pump operation

- Pump efficiency above 80 %,
- low heat transfer into the coolant system,
- low cooling requirements.

Noiseless

The design of MTS allows gentle, pulsation-free and low-noise pumping.

Wide pump range

- seven pump sizes
- 16 versions.

Pressure relief valves

Screw spindle pumps are positive-displacement pumps which must be pressure controlled in order to protect the motor and pipe system. The pumped liquid which is not needed is returned to the tank via the pressure relief valve. Selection of valves depends on the following factors:

- required pressure, flow rate and viscosity of the pumped liquid
- required valve adjustability/control.

The pressure relief valves below are especially designed for use in coolant applications.

Type	Description
H	<p>Manually operated, continuously adjustable pressure relief valve.</p> <ul style="list-style-type: none"> • The valve working pressure can be adjusted by means of a hand wheel. 
P	<p>Manually operated, continuously adjustable pressure relief valve with air pilot valve and solenoid valve for pressureless circulation.</p> <ul style="list-style-type: none"> • The valve working pressure can be adjusted by means of a hand wheel. • Circulation with minimised pressure can be electrically activated. The valve is open at zero current and pressure. 
E	<p>Electrically controlled, continuously adjustable pressure relief valve with proportional solenoid air pilot valve.</p> <ul style="list-style-type: none"> • The vario valve type enables the setting of any pressure from 5 to 120 bar. For pressure regulation, the machine control sends an analogue signal (0-10 V). The pneumatic control pressure is changed in proportion to the analogue signal and regulates the working pressure. • The valve is open in case of power loss or loss of pressure.

Customisation

The pump system can be customised to fit your special needs. Please contact Grundfos.

9. Accessories

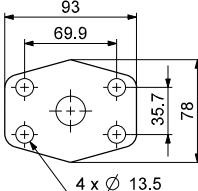

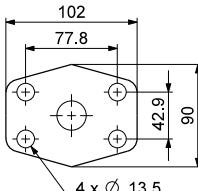

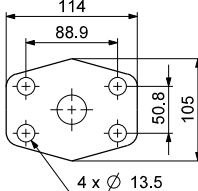

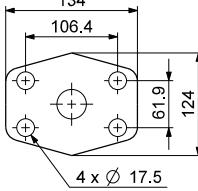

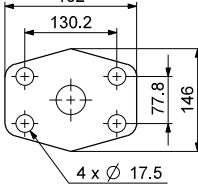

Counter flanges for discharge port

A set consists of one counter flange, one O-ring, bolts and lock washers.

SAE flange	Pump type	SAE size	Description	Rated pressure	Pipework connection	Product number
	MTS 20 MTS 40	1"	Threaded For welding	345 bar 160 bar	G1 25 mm, nominal	96397165 96397171
	MTS 80 MTS 140	1 1/2"	Threaded For welding	207 bar 160 bar	G1 1/2 38 mm, nominal	96397166 96397172
	MTS 210	2"	Threaded For welding	207 bar 160 bar	G2 49 mm, nominal	96397167 96397173
	MTS 280	2 1/2"	Threaded For welding	172 bar 160 bar	G2 1/2 62 mm, nominal	96397168 96397174
	MTS 440	3"	Threaded For welding	138 bar 160 bar	G3 62 mm, nominal	96397169 96397175

Counter flanges for suction port (only D8.6)

A set consists of one counter flange, one O-ring, bolts and lock washers

SAE flange	Pump type	SAE size	Description	Rated pressure	Pipework connection	Product number
	MTS 20 MTS 40	1 1/2"	Threaded For welding	207 bar 160 bar	G1 1/2 38 mm, nominal	96397166 96397176
	MTS 80 MTS 140	2"	Threaded For welding	207 bar 160 bar	G2 49 mm, nominal	96397167 96397177
	MTS 210	2 1/2"	Threaded For welding	172 bar 160 bar	G2 1/2 62 mm, nominal	96397168 96397178
	MTS 280	3"	Threaded For welding	138 bar 160 bar	G3 74 mm, nominal	96397169 96397179
	MTS 440	4"	Threaded For welding	345 bar 160 bar	G4 102 mm, nominal	96397170 96397180

10. Grundfos Product Center

Online search and sizing tool to help you make the right choice.

<http://product-selection.grundfos.com>

SIZING enables you to size a pump based on entered data and selection choices.

REPLACEMENT enables you to find a replacement product. Search results will include information on

- the lowest purchase price
- the lowest energy consumption
- the lowest total life cycle cost.

The screenshot shows the main landing page of the Grundfos Product Center. At the top, there's a navigation bar with links for HOME, FIND PRODUCT, COMPARE, YOUR PROJECTS, SAVED ITEMS, HELP, and a login section. Below the navigation is a search bar with placeholder text "Input product number or a whole or partial product name". Underneath the search bar are four main navigation buttons: "SIZING" (with a "Enter pump sizing" sub-label), "CATALOGUE" (with a "Products and services" sub-label), "REPLACEMENT" (with a "Replace an old pump with a new" sub-label), and "LIQUIDS" (with a "Find pump by liquid" sub-label). The "SIZING" button has a large callout pointing to the "QUICK SIZING" section below it. This section contains fields for "Flow (Q)*" and "Head (H)*" with dropdown menus for units (m³/h and m) and checkboxes for "Advanced sizing by application" and "Guided selection". To the right of this is a "Select what to size by:" section with three radio button options: "Size by application", "Size by pump design", and "Size by pump family". A "START SIZING" button is located at the bottom right of this panel. Below the "QUICK SIZING" section is a "ADVANCED SIZING:" section with similar input fields and checkboxes. A callout from the "CATALOGUE" button points to a note about access to the Grundfos product catalogue. Another callout from the "LIQUIDS" button points to a note about finding pumps for special liquids.

All the information you need in one place

Performance curves, technical specifications, pictures, dimensional drawings, motor curves, wiring diagrams, spare parts, service kits, 3D drawings, documents, system parts. The Product Center displays any recent and saved items - including complete projects - right on the main page.

Downloads

On the product pages, you can download installation and operating instructions, data booklets, service instructions, etc. in PDF format.
