Warning

Prior to installation, read these installation and operating instructions. Installation and operation must comply with local regulations and accepted codes of good practice.

1. Symbols used in this document

Warning

If these safety instructions are not observed, it may result in personal injury.

Caution

If these safety instructions are not observed, it may result in malfunction or damage to the equipment.

Note

Notes or instructions that make the job easier and ensure safe operation.

2. Applications

The Grundfos pump, type MTA, is a single-stage centrifugal pump designed for the pumping of cooling lubricants and cutting oil for machine tools.

2.1 Pumped liquids

Pump	Max. particle size [mm]
MTA 30	4-5
MTA 60	
MTA 90	8-10

5. Installation

Warning

The pump must be installed so that persons cannot accidentally come into contact with the hot surface of the motor.

Warning

The pump must be installed so that persons cannot accidentally come into contact with the rotating parts.

5.1 Pump position

Note The MTA pumps can only be mounted in vertical position.

Fig. 2 Mounting position

The pump is designed for tank mounting in vertical position. The pump is positioned in a hole cut into the cover of the tank (upper side) and is secured to the tank by four or two hexagon head screws through the holes in the mounting flange. We recommend to fit a sealing gasket between the pump flange and tank.

Provide a clearance of minimum 50 mm above the motor to ensure cooling of fan-cooled motors (MTA 120, 200 and 100H).

The pump is designed for indoor operation only.

Caution The motor must not be exposed to direct water/liquid sprays.

6. Electrical connection

The electrical connection should be carried out in accordance with local regulations.

Warning

Never make any connections in the pump terminal box unless the power supply has been switched off.

The operating voltage and frequency are marked on the pump nameplate. Make sure that the motor is suitable for the power supply on which it will be used.

The motor must be connected to a motor-protective circuit breaker.

We do not recommend operation via frequency converter.

Terminal box positions

The terminal box can be turned to another position.

- The terminal box can be turned to another position after delivery.
- (•) The terminal box cannot be turned to another position after delivery. The pump must be ordered with the terminal box in position 3 o'clock.

Fig. 7 Terminal box positions (top view)

Proceed as follows:

1. Remove the bolts securing the motor to the pump.
2. Turn the motor to the required position.
3. Refit and tighten the bolts securing the motor to the pump.

The electric motor should be connected to the supply as shown in the diagram inside the terminal box cover.

TM05 1759 3611

TM05 1760 3611

7. Startup

The pump can be started against an open or a closed discharge valve.

Before starting the pump:

- Make sure that all pipe connections are tight.
- Make sure that the pump is immersed to the recommended level.
- Make sure that chip trays are not blocked by impurities.

Start the pump as follows:

1. See the correct direction of rotation of the pump on the motor fan cover or on the sight glass. When seen from the top, the pump should rotate *counter-clockwise*.
2. Start the pump and check the direction of rotation.

TM04 8003 2610

Fig. 8 Sight glass with indication of the correct direction of rotation

TM04 8004 2610

Fig. 9 Motor fan cover with indication of the correct direction of rotation

8. Operation and maintenance

8.1 Lubrication and maintenance

Pumps installed in accordance with these instructions require very little maintenance.

The motor ball bearings are grease-packed and sealed for life. No further lubrication is necessary.

8.2 Filters

Chip trays, filters, etc. should be cleaned at regular intervals to ensure a correct flow of liquid. This will also increase the pump life.

8.3 Periodic checks

Make the following checks at regular intervals, depending on the conditions and time of operation.

- Check the quantity of liquid and operating pressure.
- Check that there are no leaks.
- Check that the motor is not overheating.
- Check the tripping of the motor-protective circuit breaker.
- Check that all control devices are operating satisfactorily.

If the above checks do not reveal any abnormal operating details, no further checks are necessary.

Should any faults be found, see section [10. Fault finding](#).

9. Service

Warning

If a pump has been used for pumping liquids which are injurious to human health or poisonous, it will be classified as contaminated.

A contaminated pump must not be sent to Grundfos for service until Grundfos has received all necessary details about the pumped liquid, etc. Otherwise Grundfos can refuse to accept the pump for service. Costs of returning the pump are to be paid by the customer.

10. Fault finding

Warning

Before starting work on the pump, make sure that the power supply has been switched off and that it cannot be accidentally switched on.

Fault	Cause	Remedy
1. Motor does not run when power supply is switched on.	a) Supply failure.	Connect the power supply.
	b) Fuses are blown.	Replace fuses.
	c) Motor-protective circuit breaker has tripped out.	Reactivate the motor protection.
	d) Main contacts in motor-protective circuit breaker are not making contact or the coil is faulty.	Replace contacts or magnetic coil.
	e) Control circuit is defective.	Repair the control circuit.
	f) Motor is defective.	Replace the pump.
2. Motor-protective circuit breaker trips out immediately when power supply is switched on.	a) Fuse on one phase is blown.	Replace fuse.
	b) Contacts in motor-protective circuit breaker are faulty.	Replace contacts in motor-protective circuit breaker.
	c) Cable connection is loose or faulty.	Fasten or replace the cable connection.
	d) Motor winding is defective.	Replace the pump.
	e) Pump mechanically blocked.	Remove the mechanical blocking of the pump.
	f) Overload setting is too low.	Set the motor-protective circuit breaker correctly.
3. Motor-protective circuit breaker trips out occasionally.	a) Overload setting is too low.	Set the motor-protective circuit breaker correctly.
	b) Low voltage at peak times.	Check the power supply.
4. Motor-protective circuit breaker has not tripped out but the pump does not run.	a) Check 1 a), b), d) and e).	
5. Pump runs but gives no liquid or pump capacity is not constant.	a) Pump inlet partly blocked by impurities.	Clean the inlet.
	b) Liquid level in tank too low.	Increase the liquid level.
	c) Pump rotates in the wrong direction.	Change the direction of rotation of the motor by switching any two of the phases.

11. Disposal

This product or parts of it must be disposed of in an environmentally sound way:

1. Use the public or private waste collection service.
2. If this is not possible, contact the nearest Grundfos company or service workshop.
