- 11. References**
- 12. Telegram examples**
- 13. Data Item Overview**

This document is mainly intended for development engineers integrating Modbus based Grundfos motors/pumps in automation systems using a direct access to Modbus.

It specifies all data items from the Functional Profile of the device with a description of how to use and interpret them. This makes the application programmer able to operate and configure the IO113 for different applications and to utilize its functionality to its full extend.

Using the information in this document for implementation of direct Modbus access presuppose a knowledge of the Modbus communications protocol.

This document can be freely distributed.

Date	Initials	Changes	Version
OCT/2012	BAL	Released document	1.6
JAN/2015	CHU/UFG	Updated document for 1. Naming of Modbus and GENIbus 2. Correction of content of DIP switches setting 3. Remove the content of mixer 4. Add version history	1.7

Version History

1. Introduction

This document describes the functional profile on Modbus for the Grundfos IO113 Module. The IO113 Module is working as a slave unit on Modbus. In order to communicate with the IO113 Module, it must be configured via DIP switch setting (DIP switch 9 = on) to enable the Modbus protocol (see also page 11).

Modbus	
Protocol	Modbus RTU
Addressing the unit	Address range: 32 – 231 Factory default address: 231 Unit Address by Geni or Modbus Note: There is 31 offset if address the unit by PC tool WU if the version is older than TC06.00.06. For example: the real address is 40 if you choose unit number 9 in PC tool WU.
Addressing a data item	As Modbus protocol describes – start address and number of data items to be read.
Data Format	Baudrate: 19200 Databit: 8 Parity: Even Stopbit: 1
Scaling	No scaling information. Please refer to data item overview, section 11

Table 1: When a data item is referred to in the text or in a table, it will often be done like this:

r_insulate (reg 1996)

r_insulate is the identifier for the data item. (1996) means register 1996 in decimal number for Modbus access.

SUPPORTED MODBUS FUNCTIONS

- (0x03) Read holding register
- (0x06) Write single registers
- (0x10) Write multiple registers
- (0x08) Diagnostics (only sub-function code 0x00)

DATA NOT AVAILABLE

16 bit data item values of '0x00FF' must be interpreted as "NA" (data not available) for Modbus, if not other is defined.

CHANGING OF SETTINGS

Whenever a setting in the IO113 module is changed via a command or a configuration parameter, the setting will take effect instantaneously, meaning that there is no need to power the IO113 module off and on again.

Notice! The only exception to this general rule are the boot commands **USER_BOOT** and **FACT_BOOT**, which both requires a subsequent RESET command or that the device is powered off and on for the boot action to take place.

Notice! Because almost all the configuration parameters reside in the SM113 power line sensor module (fig. 1) writing to configurable parameters is forwarded by IO113 over power line. This limits the maximum number of configuration parameters, which can be written from Modbus in the same telegram to only two.

MODBUS MAXIMUM TELEGRAM LENGTH

The IO113 Module cannot buffer telegrams longer than **80 bytes**. So, for Modbus access, telegrams are not allowed to exceed a complete length of 80 bytes neither for Data Requests nor for Data Replies. Only **4 registers** can be written per telegram.

2. Addressing

The unit address can be configured via dip switches as below.

Address	<div> <div>ON</div> <div>DIP</div> <div> <div>1</div><div>2</div><div>3</div><div>4</div><div>5</div><div>6</div><div>7</div><div>8</div><div>9</div><div>10</div><div>11</div><div>12</div> </div> </div>	Description
40	<div> <div>3</div><div>4</div><div>5</div> </div>	IO 113 address1
41	<div> <div>3</div><div>4</div><div>5</div> </div>	IO 113 address 2
42	<div> <div>3</div><div>4</div><div>5</div> </div>	IO 113 address 3
43	<div> <div>3</div><div>4</div><div>5</div> </div>	IO 113 address 4
44	<div> <div>3</div><div>4</div><div>5</div> </div>	IO 113 address 5
45	<div> <div>3</div><div>4</div><div>5</div> </div>	IO 113 address 6
Address set by bus	<div> <div>3</div><div>4</div><div>5</div> </div>	Unique address for IO 113 set in the control system via bus. Default address: 231.

And it can be configured by bus also. An address between 32 and 231 can be selected by addressing **unit_addr** (reg 2050). The factory default unit address is **231**.

3. Device Identification

The data items **unit_family** (reg 2019), **unit_type** (reg 2020) and **unit_version** (reg 2021) can be used to identify different *GENIbus* units [reference to GENI description]. The IO113 module will reply with the values below:

unit_family = 22
unit_type See table below
unit_version = 0

Device selection		Device name	SM 113	unit_type (reg 2020)	Description
DIP1	DIP2				
OFF	OFF	Pump, PC	X	4	SM 113 sensor board integrated (reserved)
ON	OFF	Pump, PA		5	Sensors connected directly to IO 113
OFF	ON	Pump, PB	X	6	SM 113 sensor board integrated
ON	ON	Pump, PD		7	Sensors connected directly to IO 113

Table 2: IO113 identification.

4. IO113 in a System

Figure 1: Illustration of IO113 together with pumps.

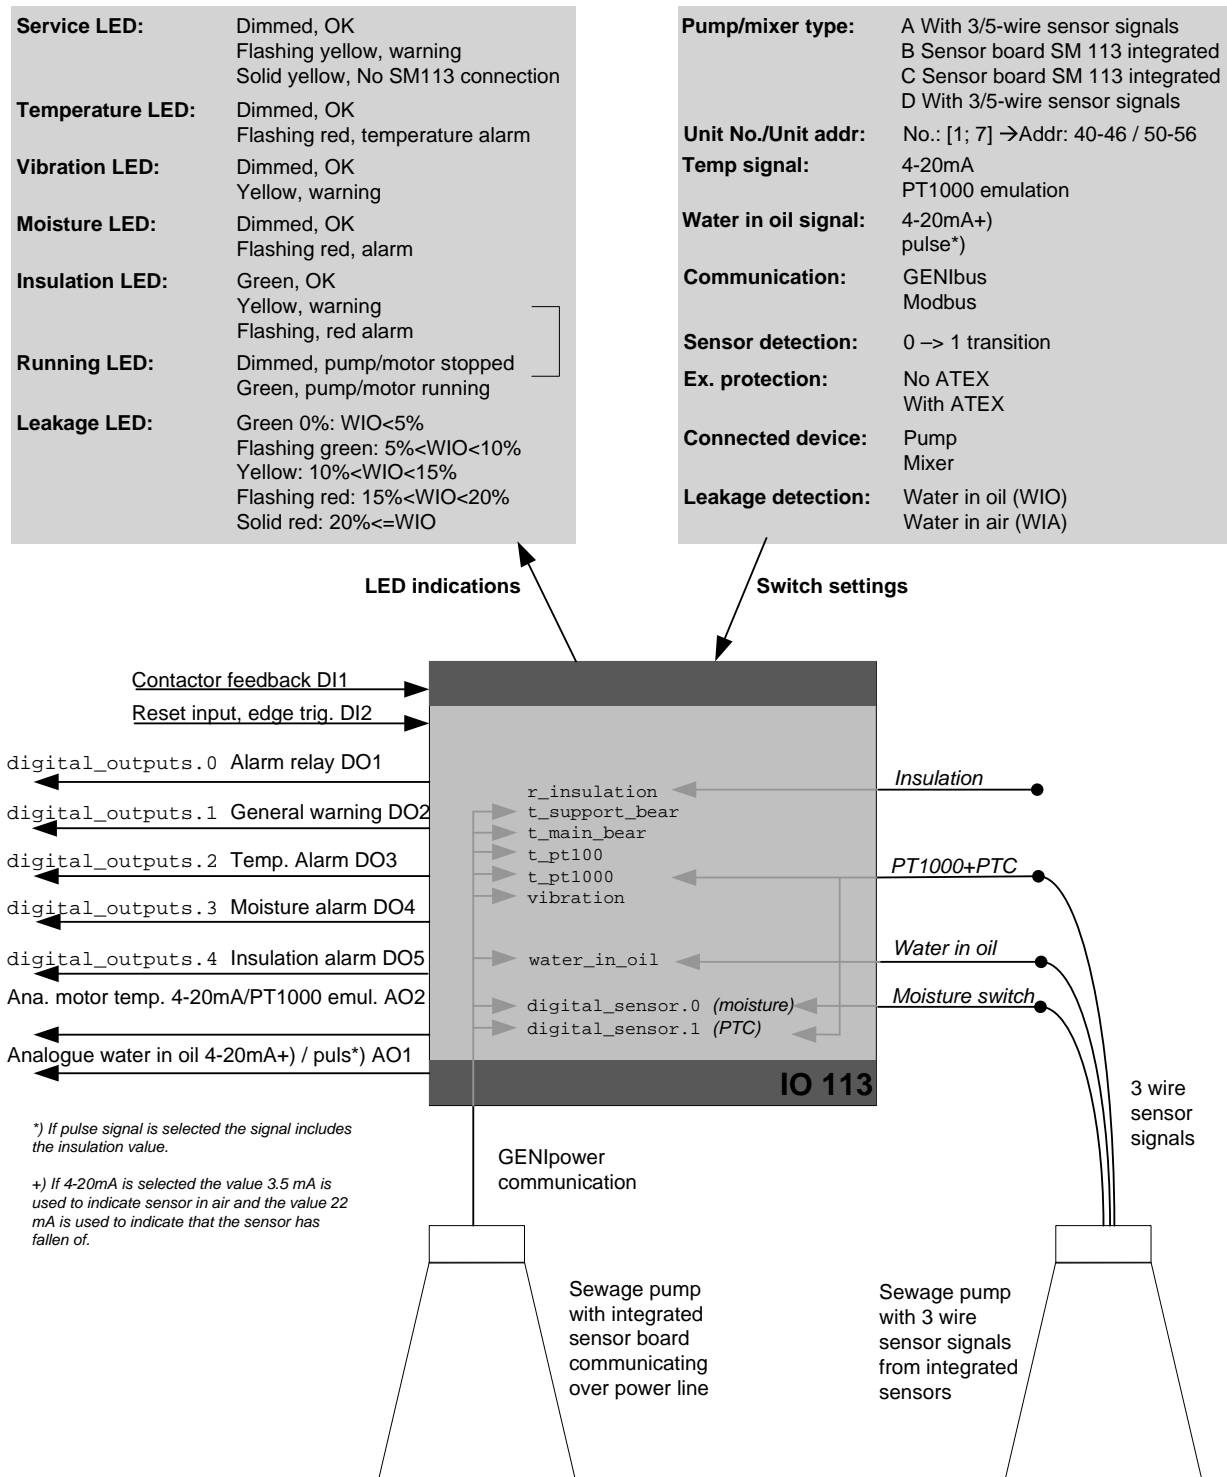

Figure 2: Illustration of IO113 input/output signals.

5. Terminal description

External connections (I/O)	
Name	Description
T1, T2	Terminal for alarm relay (DO1)
G1, A1	Analogue output 1 (AO1) of Water in oil SW7 Off: Pulse output SW7 On: 4-20mA
G2, A2	Analogue output 2 (AO2) of Stator winding temperature SW6 Off: PT1000 emulated output SW6 On: 4-20mA
K1, K2	Contactor feedback (DI1), short circuited when pump is running
R1, R2	Reset input (DI2), short-circuited to reset alarms
PE, +, -	Supply voltage: 24V +/- 10%, AC or DC
A, Y, B	RS485
I1, I2, I3	Terminals for measurement of stator insulation when motor is off. Measurement voltage is 10 Vdc
P1	Terminal for sensors in the pump
P2	Terminal for 15V supply voltage for sensors in the pump
P3	Terminal for sensors in the pump
P4	Terminal for 15V supply voltage for sensors in the pump or for power line communication with SM 113
P5	Terminal for sensors in the pump or for power line communication with SM 113
D1, D2	Digital alarm output (DO3) in case of high stator temperature
D3, D4	Digital alarm output (DO4) in case of moisture in motor
D5, D6	Digital alarm output (DO5) in case of insulation fault in motor
D7, D8	Digital warning output (DO2) in case of: Connection to SM113 (Code 10) Setup conflict (Code 25) Stator insulation warning (Code 20)

Table 5.1: External connections

DIP switch settings	
Name	Description
SW1	Pump variant selection:
SW2	00: Type A 01: Type B 10: Type C 11: Type D
SW3	Select the SM113 address. The maximum address is 6, the default no is 1.
SW4	
SW5	
SW6	The slave SM113 detects sensor status and communicates with IO113 to be set address
SW7	Selects signal type of AO2 for stator winding temperature: 0: 4-20mA 1: PT1000 emulated output
SW8	Selects signal type of AO1 for Water in oil: 0: 4-20mA 1: Pulse output
SW9	Selects fieldbus protocol for RS485 (A, Y, B) terminals: 0: GENIbus 1: Modbus
SW10	Explosion protection (ATEX area): 0: No ATEX 1: ATEX
SW11 / SW12	Product type: 00: Pump with WIO sensor 01: Reserved for further configuration (No WIO or WIA sensor) 10: Pump with WIA sensor 11: Reserved for further configuration (No WIO or WIA sensor)

Table 5.2: DIP switch settings.

6. Supervised values and related limits and signals

Measurement	Identifier	A/D	Alarm/Warning limit	Measurement source			Event code	Signal fault code	Related digital output	Related front plate LEDs
				3 wire signals	PL signals	IO113 meas.				
Temperature in support bearing (PT100)	t_support_bear	A	t_support_bear_alarm t_support_bear_warn		X		A/W: 145	W: 179	dig_outputs.0: Alarm relay ^{*)} dig_outputs.2: Temp. alarm ^{**)}	Temp. LED: front_leds1.2: Dimmed, temp. OK Flash service led, pump temp, warn Red flashing, Pump temp. alarm ^{**)}
Temperature in main bearing (PT100)	t_main_bear	A	t_main_bear_alarm t_main_bear_warn		X		A/W: 146	W: 180	dig_outputs.1: General warning	
PT100 motor stator temperature	t_pt100	A	t_pt100_alarm t_pt100_warn		X		A/W: 64		dig_outputs.1: General warning	Service LED: front_leds1.0-1: Flash service led, pump temp, warning Red flashing, Pump temp. alarm
PT1000 motor stator temperature	t_pt1000	A	t_pt1000_alarm t_pt1000_warn	X	X					
Insulation resistance	r_insulate	A	r_insulate_alarm r_insulate_warn			X	A/W: 20	-	dig_outputs.0: Alarm relay dig_outputs.1: General warning dig_outputs.4: Insulation alarm	Insulation LED: front_leds1.5-6: Green, insulation OK Yellow, insulation warning Red flashing, insulation alarm
Water in oil	water_in_oil	A	water_in_oil_alarm water_in_oil_warn	X	X		A/W: 11	W: 170	dig_outputs.0: Alarm relay ^{*)} dig_outputs.1: General warning	Leakage LED: front_leds2.0-2: Green, leakage<0% Flashing green, 5%<leakage<10% Yellow, 10%<leakage<15% Flashing red, 15%<leakage<20% Red, leakage>20% Flashing yellow: Signal fault ^{*) **)}
Power Line Communication		A	pl_com_limit			X	A/W: 10	-	dig_outputs.0: Alarm relay ^{*)} dig_outputs.1: General warning dig_outputs.2: Temp. alarm ^{*)}	Service LED: front_leds1.0-1: Yellow, comm.. alarm ^{*)}
Vibration	vibration	A	vibration_alarm vibration_warn		X		A/W: 24	-	-	Vibration LED: front_leds1.3: Dimmed, vibration OK Yellow, vibration warning
Time for service	t_run_trip_cnt	A	t_run_trip_cnt_warn			X	W: 12	-	dig_outputs.1: General warning	Service LED: front_leds1.0-1: Flashing yellow, service warning
Moisture switch bottom	digital_sensor.0	D	-	X	X		A: 22	-	dig_outputs.0: Alarm relay dig_outputs.3: Moisture alarm	Moisture LED: front_leds1.4: Dimmed, moisture OK Flashing red, moisture alarm
Thermal switch (PTC)	digital_sensor.1	D	-	X	X		A: 69	A: 181	dig_outputs.0: Alarm relay dig_outputs.2: Temp. alarm	Temp. LED: front_leds1.2: Dimmed, temp. OK Red flashing, Pump temp. alarm
Water in air (WIA)	water_in_air	D	-	X	X		W: 11	W: 170	dig_outputs.1: General warning	Leakage LED: See above
EEPROM status in Sensor Board	-	D	-		X		W: 85	-	dig_outputs.1: General warning	Service LED: front_leds1.0-1: Flashing yellow, service warning
EEPROM status in IO113	-	D	-			X	W: 83	-		
Setup conflict	-	D	-		X	X	A/W: 25	-		

*) If "sensor placed in air" fault.

**) Only if Ex (Explosion protected) is enabled.

***) If the SM113 is of type without PTC and IO113 has been setup to SM113 with sensor board, this gives a setup conflict alarm (security risc). If the SM113 is of type with PTC and IO113 has been setup to SM113 without PTC this gives a setup conflict warning (no security risc).

+) Only if Ex (Explosion protected) is enabled or connected pumtype is C (SM113 with PTC).

Table 3: An overview of supervised values/conditions with related limits and alarm codes. IO113 builds a functional profile using measurements from different sources as shown.

The alarm code status (**alarm_code**), the warning code status (**warning_code**), the alarm/warning bits (**alarms / warnings#**) and the digital outputs (**dig_out**) always reflect the actual status of the alarm/warning condition.

alarms (reg 2012)

Individual alarms recording

Bit No. Description

- 0: Moisture switch activated (code 22)
- 1: Thermal switch (PTC) activated (code 69)
- 2: Thermal switch (PTC) signal fault (code 181)
- 3: PT100 motor stator temperature high (code 64)
- 4: PT1000 motor stator temperature value high (code 64)
- 5: Power line communication error rate high (code 10)
- 6: Setup conflict (code 25)
- 7: -
- 8: Motor support bearing temperature value high (code 145)
- 9: Motor main bearing temperature value high (code 146)
- 10: Motor support bearing temperature sensor signal fault (179)
- 11: Motor main bearing temperature sensor signal fault (180)
- 12: Insulation resistance value low (code 20)
- 13: Leakage (Water in oil value /water in air)high (code 11)
- 14: Leakage (Water in oil) Water in oil sensor signal fault (code 170)
- 15: Vibration value high (code 24)

warnings1 (reg 2013)

Individual warnings recording

Bit No. Description

- 0: -
- 1: -
- 2: -
- 3: PT100 motor stator temperature high (code 64)
- 4: PT1000 motor stator temperature high (code 64)
- 5: Power line communication error rate high (code 10)
- 6: Setup conflict (code 25)
- 7: -
- 8: Motor support bearing temperature value high (code 145)
- 9: Motor main bearing temperature value high (code 146)
- 10: Motor support bearing temperature sensor signal fault (179)
- 11: Motor main bearing temperature sensor signal fault (180)
- 12: Insulation resistance value low (code 20)
- 13: Leakage (Water in oil value high / Water in air) (code 11)
- 14: Leakage (Water in oil) sensor signal fault (code 170)
- 15: Vibration value high (code 24)

warnings2 (reg 2014)

Individual warnings recording, byte 3

Bit No. Description

- 0: IO113 EEPROM parameter verification error (code 83)
- 1: Sensor board EEPROM parameter verification error (code 85)
- 2: Time for service
- 7-2: -

alarms_enable (reg 2059) Individual enable/disable of alarms

<u>Bit No.</u>	<u>Description</u>
0:	Moisture switch activated (code 22)
1:	Thermal switch (PTC) activated (code 69)
2:	Thermal switch (PTC) signal fault (code 181)
3:	PT100 motor stator temperature high (code 64)
4:	PT1000 motor stator temperature value high (code 64)
5:	Power line communication error rate high (code 10)
6:	Setup conflict (code 25)
7:	-
8:	Motor support bearing temperature value high (code 145)
9:	Motor main bearing temperature value high (code 146)
10:	Motor support bearing temperature sensor signal fault (179)
11:	Motor main bearing temperature sensor signal fault (180)
12:	Insulation resistance value low (code 20)
13:	Leakage (Water in oil value high / Water in air) (code 11)
14:	Water in oil sensor signal fault (code 170)
15:	Vibration value high (code 24)

warnings1_enable (reg 2060) Individual enable/disable of warnings

<u>Bit No.</u>	<u>Description</u>
0:	-
1:	-
2:	-
3:	PT100 motor stator temperature high (code 64)
4:	PT1000 motor stator temperature high (code 64)
5:	Power line communication error rate high (code 10)
6:	Setup conflict (code 25)
7:	-
8:	Motor support bearing temperature value high (code 145)
9:	Motor main bearing temperature value high (code 146)
10:	Motor support bearing temperature sensor signal fault (179)
11:	Motor main bearing temperature sensor signal fault (180)
12:	Insulation resistance value low (code 20)
13:	Leakage (Water in oil) sensor signal fault (code 11)
14:	Water in oil sensor signal fault (code 170)
15:	Vibration value high (code 24)

warnings2_enable (reg 2061) Individual warnings enable/disable, byte 3

<u>Bit No.</u>	<u>Description</u>
0:	IO113 EEPROM parameter verification error (code 83)
1:	Sensor board EEPROM parameter verification error (code 85)
2:	Time for service
7-3:	-

sensors_present (reg 2015) Result of sensor signal auto learning or presetting, byte 1
Shows whether a given sensor signal is present or not.

<u>Bit No.</u>	<u>Description</u>
0:	Moisture switch present
1:	Thermal switch (PTC) present
2:	-
3:	PT100 motor stator temperature sensor present
4:	PT1000 motor stator temperature sensor present
5:	Power line communication error rate calculation present
7-6:	-
8:	Motor support bearing temperature sensor present
9:	Motor main bearing temperature sensor present
10:	-
11:	-
12:	Insulation resistance sensor present
13:	Leakage (Water in oil / Water in air) sensor present
14:	-
15:	Vibration sensor present

Error code	Alarm/warning event	alarms	warnings1	warnings2	alarms_enable	warnings1_enable	warnings2_enable	sensors_present	Related dig_output bit signals		Related LED bit signals	
									Alarm	Warning	Alarm	Warning

	2:	<i>Acknowledge status</i> 0: No unacknowledged (pending) alarm 1: Unacknowledged (pending) alarm (Cleared with RESET_ALARM or pushing the [Reset] button)
	7-3:	Not used

8. Digital input/output

dip_switch (reg 2016)	Hardware DIP switch 1-12 used for various setup	
	<u>Bit No.</u>	<u>Description</u>
	0:	SW6: Transition 0->1 is required to execute ARM_LEARNING command
	1:	SW10: <i>Explosion protection</i>
	0:	No
	1:	Yes
	3-2:	SW12/SW11: <i>Product type</i>
	00:	Pump with WIO sensor
	10:	Reserved for further configuration (No WIO or WIA sensor)
	01:	Pump with WIA sensor
	11:	Reserved for further configuration (No WIO or WIA sensor)
	4-7:	Reserved
	9-8:	SW2, SW1: <i>pump variant</i>
	00:	C: With SM 113 sensor board (reserved)
	01:	A: Without SM113, sensors are connected to IO113
	10:	B: With SM 113 sensor board
	11:	D: Without SM113, Only WIO and WIA sensors are connected to IO113
	12-10:	SW3, SW4, SW5: Define the IO113 address
	000:	Address switch disabled.
		unit_addr programmed via Modbus.
	001	unit_addr = 40
	010	unit_addr = 41
	:	-
	110	unit_addr = 45
	13:	SW7: <i>Analogue motor temperature output signal selection</i>
	0:	Motor temperature is a 4-20mA signal
	1:	Motor temperature is a PT1000 emulated signal
	14:	SW8: <i>Analogue water in oil output signal selection</i>
	0:	Water in oil is a 4-20mA signal (3.5mA: sensor in air; 22mA: sensor has fallen off)
	1:	Water in oil is a puls signal (also containing the insul. value and WIO signal fault)
	15:	SW9: <i>Communications interface</i>
	0:	GENIbus
	1:	Modbus
dig_outputs (reg 2017)	Status of digital outputs and output relays	
	<u>Bit No.</u>	<u>Description</u>
	0:	Alarm relay :
		Motor support bearing temp. high ^{**})
		Motor main bearing temperature high ^{**})
		Motor support bearing temp. signal fault ^{**})
		Motor main bearing temp. signal fault ^{**})
		Insulation resistance low
		Leakage (WIO high / WIO sensor in air) ^{**})
		Leakage (Water in oil) sensor signal fault ^{**})
		Moisture switch activated
		Thermal switch (PTC) activated
		Thermal switch (PTC) signal fault
		Power line communication error
		Setup conflict alarm ^{**})
	1:	General warning:
		Motor support bearing temp. high ^{**})
		Motor main bearing temperature high ^{**})
		Motor support bearing temp. signal fault ^{**})
		Motor main bearing temp. signal fault ^{**})
		Insulation resistance low
		Leakage (Water in oil value high)

Leakage (Water in oil) sensor signal fault
 Power line communication error
 IO113 EEPROM param. ver. error
 SM113 EEPROM param. ver. error
 Time for service
 Setup conflict

- 2: Temperature high alarm
- 3: Moisture high alarm
- 4: Insulation low alarm

**) Only if Ex (Explosion protected) is enabled. If Ex is disabled only warning will set the output
 *) If "sensor placed in air" fault

dig_inputs (reg 2018)

Status of digital inputs.

- 0: *Contactor feedback*
 - 0: Motor switched out (stopped)
 - 1: Motor switched in (started)
- 1: *Reset button*
 - 0: Disabled (locked)
 - 1: Enabled
- 2: *Alarm reset*
 - 0: Alarm reset not active
 - 1: Alarm reset active

9. Front plate diode indications

Figure 9.1: IO113 front plate image.

front_leds1 (reg2069)	Status of front plate LED's part 1
<u>Bit No.</u>	<u>Description</u>
1-0:	<i>Service LED</i>
	00: Dimmed, condition sound
	01: Flashing yellow, service warning (Code 12) or setup conflict (Code 25)
	10: Solid yellow, no connection to SM 113 (Code 10)
	11: -
2:	<i>Temperature LED</i>
	0: Dimmed, condition sound
	1: Flashing (1 Hz) red, over-temperature alarm (Code 64, 145, 146)
3:	<i>Vibration LED</i>
	0: Dimmed, condition sound
	1: Solid yellow, vibration warning (Code 24)
4:	<i>Moisture LED</i>
	0: Dimmed, condition sound
	1: Flashing (1 Hz) red, moisture alarm (Code 22)
6-5:	<i>Insulation LED</i>
	00: Solid green, condition sound
	01: Solid yellow, insulation warning (Code 20)
	10: Flashing (1 Hz) red, insulation alarm (Code 20)
	11: -
7:	<i>Running LED</i>
	0: Dimmed, pump is stopped
	1: Solid green, pump is running
front_leds2 (reg2070)	Status of front plate LED's part 2
<u>Bit No.</u>	<u>Description</u>
2-0:	<i>Leakage LED</i>
	000: Solid green, leakage < 5%, condition sound
	001: Flashing green, 5% < leakage < 10%,
	010: Solid yellow, 10% < leakage < 15%, leakage warning (Code 11)
011:	Flashing (1 Hz) red, 15% < leakage < 20%, leakage alarm (Code 11)
	100: Solid red, leakage > 20%, leakage alarm (Code 11)
	101: Flashing (1 Hz) yellow, leakage signal fault
7-3:	-

Notice that alarms and warnings from PT100/PT1000 are not indicated with LEDs and does not trigger the alarm relay. PT temperature alarms/warnings can only be read via modbus. This gives the system integrator the option to program his own temperature limits in a system controller (PLC, PC).

10. Value resetting

Value resetting the IO113 means to clear counters and logged values and return settings to predefined (factory) values. The IO113 has three commands for this each operating on different data items (see Table 6).

	Command RESET_HIST	Command USER_BOOT	Command FACT_BOOT
Action	<ul style="list-style-type: none"> Resets trip counters: t_run_trip_cnt_hi/lo start_trip_cnt_hi/lo Resets “service” peak logs r_insulate_peak_serv vibration_peak_serv water_in_oil_peak_serv aux_sensor_peak_serv t_supp_bear_peak_serv t_main_bear_peak_serv t_pt100_peak_serv t_pt1000_peak_serv Resets “service” alarm counters overtemp_serv_cnt_hi/lo 	<ul style="list-style-type: none"> Resets Power on counter and Running time counter^{*)} t_run_hi/lo t_on_hi/lo start_cnt_hi/lo Resets trip counters t_run_trip_cnt_hi/lo start_trip_cnt_hi/lo Resets peak logs r_insulate_peak vibration_peak water_in_oil_peak aux_sensor_peak t_supp_bear_peak t_main_bear_peak t_pt100_peak t_pt1000_peak 	<ul style="list-style-type: none"> Resets the same values as USER_BOOT Returns all configuration parameters to their factory default.

^{*)} Cleared in the IO113 but not in the sensor board

Table 6: Value resetting the IO113.

12. Telegram examples

Request data:

In this example the support bearing temperature is requested. The reply answers with temperature measured to 95 °C.

Request	Data
Address	231 [0xE7]
Function code	3 [0x03]
Reg. byte hi	7 [0x07]
Reg. byte lo	200 [0xC8]
No. of reg. hi	0 [0x00]
No. of reg. lo	1 [0x01]
Crc lo	*) 18 [0x12]
Crc hi	*) 134 [0x86]

*) Calculated by software

Answer	Data
Address	231 [0xE7]
Function code	3 [0x03]
Data byte count	2 [0x02]
Hi data value	0 [0x00]
Lo data value	95 [0x5f]
Crc lo	*) 170 [0xAA]
Crc hi	*) 241 [0xF1]

Execute command:

In this example a START command is sent.

Request	Data
Address	231 [0xE7]
Function code	16 [0x10]
Reg. byte hi	7 [0x07]
Reg. byte lo	245 [0xF5]

No. of reg. hi	0 [0x00]
No. of reg. lo	1 [0x01]
Crc lo	*) 198 [0xC6]
Crc hi	*) 138 [0x8A]

13. Data Item Overview

Explanation to used abbreviations for scaling:

<unit>: The data item has this unit as its fixed scaling. All data items use extended precision scaling.

unsca.: The data item is unscaled (e.g. a number, a counter, etc.).

bits: The data item is bit interpreted. The bit interpretation is explained in the text chapters.

Identifier	Modbus		R/W	Description
	Register	Scaling		
t_support_bear ^{*)}	1992	1 °C	R	Temperature in support bearing (PT100)
t_main_bear ^{*)}	1993	1 °C	R	Temperature in main bearing (PT100)
