1. Introduction

This data booklet deals with Grundfos CR, CRI and CRN pumps.

GR5381

CR, CRI and CRN 1s-64

TM069062

CR, CRN 95-255

CR pumps are vertical multistage, centrifugal pumps. The in-line design of the pumps enables installation in a horizontal one-pipe system where the inlet and outlet ports are in the same horizontal level and have the same pipe dimensions. This design provides a more compact pump design.

The pumps are available in various sizes and various numbers of stages to deliver the flow rate and pressure required.

CR pumps are designed for a variety of applications ranging from the pumping of potable water to the pumping of chemicals. The pumps are therefore suitable for a wide diversity of pumping systems where the performance and material of the pump meet specific demands.

A CR pump consists of two main components: the motor and the pump unit.

The motor is a Grundfos or Innomotics motor designed to EN standards.

The pump unit consists of optimized hydraulics, various types of connections, a sleeve, a pump head and various other parts.

CR pumps are available in various material versions according to the pumped liquid.

Typical applications

The pumps are suitable for numerous applications. The following applications are some typical examples.

Water supply:

- Filtration and transport waterworks
- Distribution from waterworks
- Pressure boosting of mains.

Industrial:

- Pressure boosting
- Process water transfer
- Boiler feed
- Cooling and air conditioning
- Firefighting systems
- Special liquids transfer.

Water treatment:

- Filtration
- Brackish water reverse osmosis.

Commercial building services:

- Chilled-water systems
- Hot-water systems
- Pressure boosting
- Boiler feed
- Firefighting systems
- District energy systems.

Related information

[4. Applications](#)

Pumped liquids

The pumps are designed to pump non-explosive liquids that do not chemically attack the pump materials.

When pumping liquids with a density or viscosity higher than that of water, oversized motors may be required.

Whether a pump is suitable for a particular liquid depends on several factors of which the most important are the chloride content, pH-value, temperature and content of chemicals and oils.

Note that aggressive liquids may attack or dissolve the protective oxide film of the stainless steel and thus cause corrosion.

Related information

[12. List of pumped liquids](#)

CR and CRI

These pumps are suitable for non-corrosive liquids. Use them for liquid transfer, circulation and pressure boosting of cold or hot clean water.

CRN

This pump is suitable for industrial liquids. Use it in systems where all parts in contact with the liquid must be made of high-grade stainless steel.

ErP-compliant

The product is energy-optimized and complies with the ecodesign requirements for water pumps specified in the ErP Directive, Commission Regulation (EC) No. 547/2012, effective as of January 1, 2013. From that day on, all pumps are classified and graduated based on the Minimum Efficiency Index (MEI).

Minimum Efficiency Index

The Minimum Efficiency Index (MEI) is the dimensionless scale unit for hydraulic pump efficiency at best efficiency point (BEP), part load (PL) and overload (OL). The Commission Regulation (EU) sets efficiency requirements to the MEI over or equal to 0.10 as of January 1, 2013, and the MEI over or equal to 0.40 as of January 1, 2015. An indicative benchmark for the best-performing water pump available on the market as of January 1, 2013 is determined in the Commission Regulation.

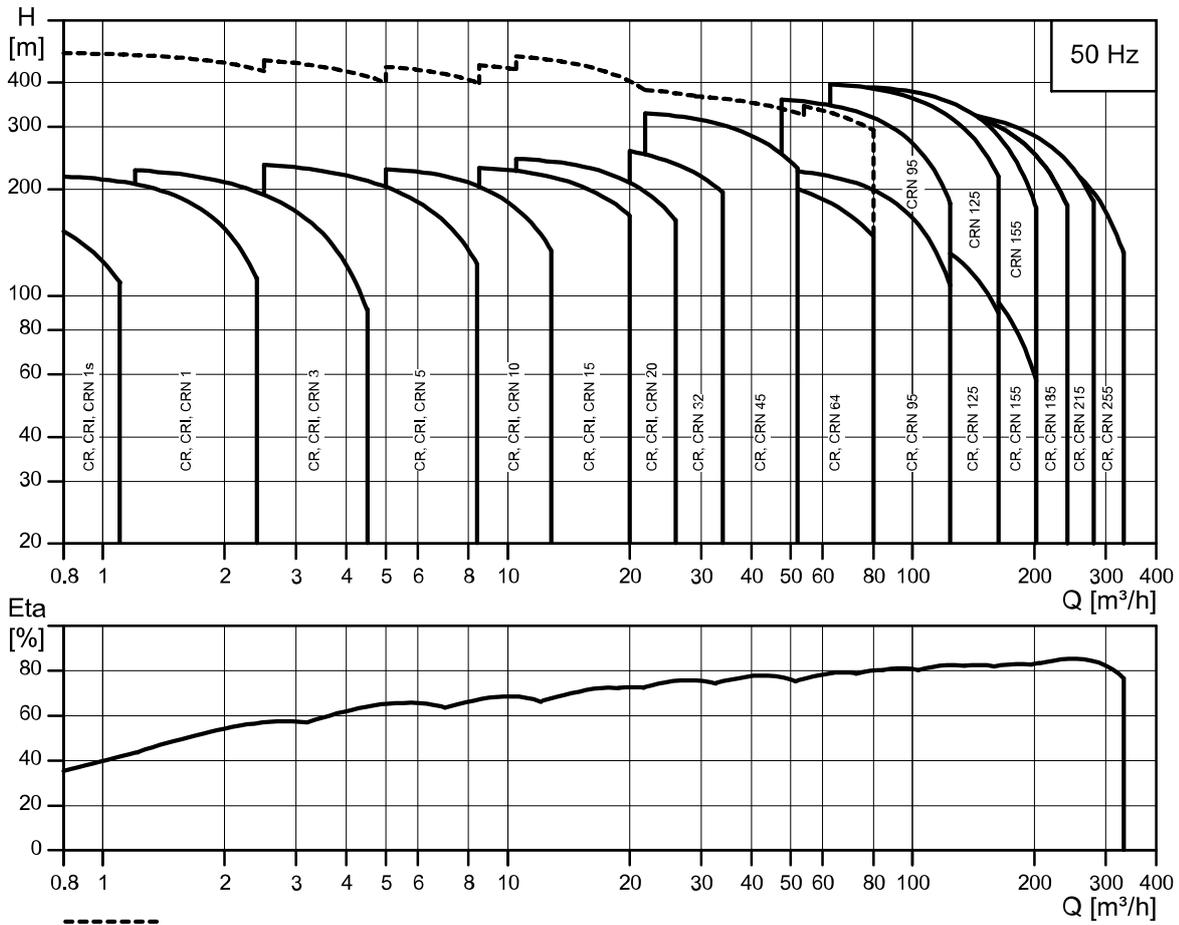

- The benchmark for the most efficient water pumps is the MEI over or equal to 0.70.
- The efficiency of a pump with a trimmed impeller is usually lower than that of a pump with a full impeller diameter. The trimming of the impeller adapts the pump to a fixed duty point, leading to reduced energy consumption. The Minimum Efficiency Index (MEI) is based on the full impeller diameter.
- The operation of this water pump with variable duty points may be more efficient and economic when controlled, for example, by a variable-speed drive that matches the pump duty to the system.
- Information on benchmark efficiency is available at <http://europump.eu/efficiencycharts>.

MEI values for CR pumps

| Pump type | MEI |
|-----------|--------|
| CR 1s-3 | 0.54 |
| CR 1-3 | > 0.70 |
| CR 3-3 | > 0.70 |
| CR 5-3 | 0.57 |
| CR 10-3 | > 0.70 |
| CR 15-3 | > 0.70 |
| CR 20-3 | > 0.70 |
| CR 32-3 | > 0.70 |
| CR 45-3 | > 0.70 |
| CR 64-3 | > 0.70 |
| CR 95-3 | > 0.70 |
| CR 125-3 | > 0.70 |
| CR 155-3 | > 0.70 |

| Pump type | MEI |
|-----------|--------|
| CR 185-3 | > 0.70 |
| CR 215-3 | ≥ 0.70 |
| CR 255-3 | ≥ 0.70 |

- Recommended version
- Alternative version

Note that for applications involving CIP (clean-in-place) and pumps with motors above 55 kW, you must use a bearing flange and a base without thrust handling device.

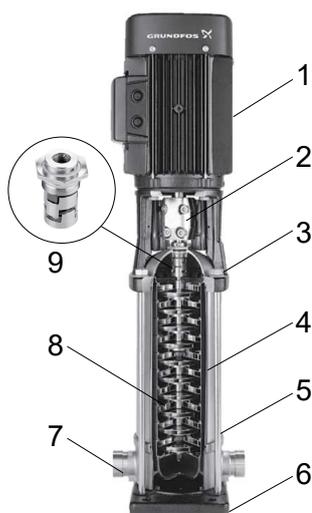

5. Features and benefits

Pump

The CR pumps are non-self-priming, vertical multistage centrifugal pumps.

The pumps are available with a Grundfos or Innomotics standard motor.

The pump consists of a base and a pump head. The chamber stack and the sleeve are secured between the base and the pump head by means of staybolts. The base has inlet and outlet ports on the same level (in line). All pumps are fitted with a maintenance-free mechanical shaft seal of the cartridge type.

Motor

Grundfos MG and Innomotics motors

CR, CRI and CRN pumps are fitted with totally enclosed, fan-cooled, 2-pole standard motors with principal dimensions to EN standards.

Electrical tolerances according to EN 60034.

CR, CRI, CRN pumps are fitted with three-phase MG motors as standard up to 18.5 kW and Innomotics motors from 22 to 200 kW.

CR, CRI, CRN pumps from 0.37 to 2.2 kW are also available with single-phase motors (1 x 220-230/240 V). See Grundfos Product Center (<http://product-selection.grundfos.com/>).

Electrical data

| Standard motors CR, CRI, CRN | |
|---------------------------------|--|
| Mounting designation | Up to 4 kW: B14/V18 tapped-hole flange From 5.5 kW: B5/V1 free-hole flange |
| Insulation class | F |
| Efficiency class | IE4 |
| Enclosure class | IP55 ⁵⁾ |
| Supply voltage | 3 x 220-230/380-400 V P2: 0.37 - 1.5 kW |
| Tolerance: +/- 10 % | 3 x 380-400/660-690 V P2: 2.2 - 18.5 kW 3 x 380-420/660-725 V P2: 22-200 kW |
| Supply frequency | 50 Hz |

⁵⁾ IP44 and IP54 are available on request.

Grundfos E-motors

We also offer frequency-controlled CRE pumps which are the ideal choice for a number of applications characterized by a demand for a variable flow rate at a constant pressure. These pumps are suited for water supply systems and pressure boosting as well as for industrial applications. Depending on the application, the pumps offer energy savings, increased comfort and improved processing.

See the CRE, CRIE, CRNE data booklet available in Grundfos Product Center at <http://product-selection.grundfos.com/>.

Optional motors

The Grundfos standard range of motors covers a wide variety of application demands. However, for special applications or operating conditions, custom-built motor solutions can be provided, such as the following:

- ATEX-approved motors
- MG motors with anti-condensation heating unit
- motors with thermal protection.

Motor protection of MG and Innomotics motors

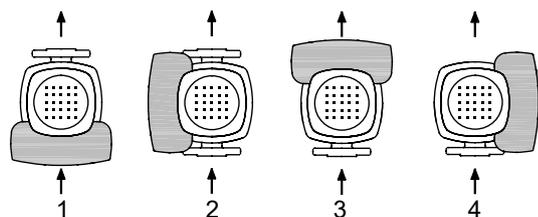

Single-phase Grundfos motors have a built-in thermal overload switch (TP 211 according to IEC 34-11).

Three-phase motors must be connected to a motor-protective circuit breaker according to local regulations.

Three-phase Grundfos motors as from 3 kW have a built-in thermistor (PTC) according to DIN 44082 (TP 211 according to IEC 34-11).

Terminal box positions

As standard, the terminal box is fitted on the inlet side of the pump.

TM033658

Terminal box positions

| Pos. | Description |
|------|-------------------------------|
| 1 | 6 o'clock position (standard) |
| 2 | 9 o'clock position |
| 3 | 12 o'clock position |
| 4 | 3 o'clock position |

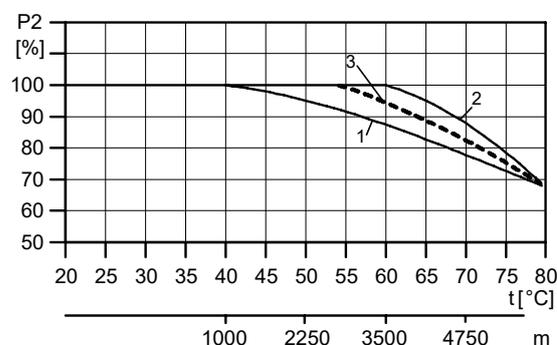

Ambient temperature

| Motor power [kW] | Motor make | Motor efficiency class | Maximum ambient temperature [°C] | Maximum altitude above sea level [m] |
|------------------|------------|------------------------|----------------------------------|--------------------------------------|
| 0.37 - 0.55 | MG | - | 40 | 1000 |
| 0.75 - 18.5 | MG | IE4 | 60 | 3500 |
| 22-200 | Innomotics | IE4 | 55 ⁶⁾ | 2750 |

⁶⁾ The maximum ambient temperature for Innomotics motors operated by a frequency converter is 40 °C.

If the ambient temperature exceeds the above maximum temperatures or the pump is installed at an altitude exceeding the above altitude values, the motor must not be fully loaded due to the risk of overheating. Overheating may result from excessive ambient temperatures or the low density and consequently low cooling effect of the air.

In such cases, it may be necessary to use a motor with a higher rated output.

TM032479

Motor output in relation to temperature and altitude

| Pos. | Motor power [kW] | Motor make |
|------|------------------|------------|
| 1 | 0.37 - 0.55 | MG |
| 2 | 0.75 - 18.5 | MG |
| 3 | 22-200 | Innomotics |

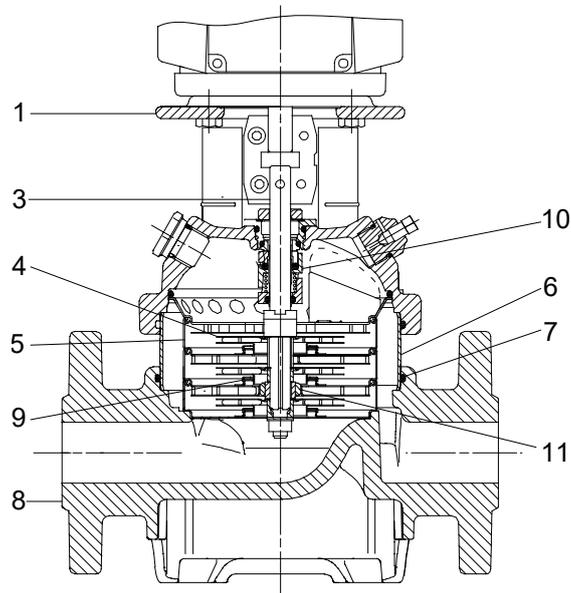

Viscosity

Pumping liquids with densities or kinematic viscosities higher than those of water causes a considerable pressure drop, a drop in the hydraulic performance and a rise in the power consumption.

In such situations, the pump must be fitted with a larger motor. If in doubt, contact Grundfos.

²⁶⁾ In standard configurations. For operating conditions outside the standard, contact Grundfos.

²⁷⁾ For operating pressures above 25 bar, see section about operating range of the shaft seal.

Operating range of the shaft seal

All pumps will be delivered with an HQQE/V cartridge shaft seal as standard.

The operating range of the shaft seal depends on operating pressure, pump type, type of shaft seal and liquid temperature. The range of standard shaft seals applies to clean water and water with anti-freeze liquids. For selection of the right shaft seal, see section with list of pumped liquids. If the operating range is exceeded, the life of the shaft seal may be reduced.

Note that if you pump demineralized water with a conductivity below 2 µS/cm with a pump equipped with a silicon carbide/silicon carbide shaft seal, there is an increased risk of electrochemical corrosion. We recommend that you use a silicon carbide/carbon or silicon carbide/tungsten carbide shaft seal instead.

Shaft seals

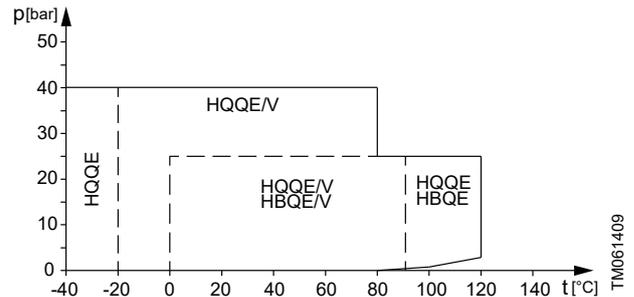

Ø12, Ø16 and Ø22 shaft seals

Operating range of standard shaft seals

| Standard shaft seal | Motor size [kW] | Description | Liquid temperature [°C] |
|---------------------|-----------------|---|-------------------------|
| HQQE | | O-ring (cartridge) (balanced seal), silicon carbide/silicon carbide, EPDM | -40 to +120 |
| HQQV | 0.37 - 55 | O-ring (cartridge) (balanced seal), silicon carbide/silicon carbide, FKM | -20 to +90 |
| HQBE | | O-ring (cartridge) (balanced seal), silicon carbide/carbon, EPDM | 0 to 120 |
| HQBV | | O-ring (cartridge) (balanced seal), silicon carbide/carbon, FKM | 0 to 90 |

Ø28 and Ø36 shaft seals (75-200 kW)

Operating range of standard shaft seals

| Standard shaft seal | Motor size [kW] | Description | Liquid temperature [°C] |
|---------------------|-----------------|---|-------------------------|
| HQQE | | O-ring (cartridge) (balanced seal), silicon carbide/silicon carbide, EPDM | -40 to +120 |
| HQQV | 75-200 | O-ring (cartridge) (balanced seal), silicon carbide/silicon carbide, FKM | -20 to +90 |
| HQBE | | O-ring (cartridge) (balanced seal), silicon carbide/carbon, EPDM | 0 to 120 |
| HQBV | | O-ring (cartridge) (balanced seal), silicon carbide/carbon, FKM | 0 to 90 |

Maximum inlet pressure

The following table shows the maximum permissible inlet pressure. However, the outlet pressure, which is the actual inlet pressure plus the pressure delivered by the pump must always be lower than the maximum permissible operating pressure.

If the maximum permissible operating pressure is exceeded, the conical bearing in the motor may be damaged and the life of the shaft seal, reduced.

| Pump type and stages | Maximum inlet pressure [bar] |

Examples of operating and inlet pressures

The values for operating and inlet pressures must not be considered individually and must comply with the below statement.

The outlet pressure must be equal to or lower than the maximum operating pressure.

See the following definitions and examples.

Definitions

| Pressure type | Definition |
|----------------------------|--|
| Maximum operating pressure | The maximum pressure is stated on the nameplate. |
| Pump differential pressure | The difference between the outlet pressure and inlet pressure. |
| Inlet pressure | The pressure measured at the pump inlet. |
| Outlet pressure | The inlet pressure added to the pump differential pressure. |

Example 1

|-----------------------------|------------------------------|
| Pump, see CR 5 curve: | CR 5-16 A-A-A |
| Max. operating pressure: | 16 bar |
| Max. inlet pressure: | 10 bar |
| Pump differential pressure: | 10.6 bar * |
| | * Flow = 0 m ³ /h |

This pump is not allowed to start at an inlet pressure of 10 bar, but at an inlet pressure of 16.0 - 10.6 = 5.4 bar.

Example 2

| | |
|-----------------------------|------------------------------|
| Pump, see CR 10 curve: | CR 10-2 A-A-A |
| Max. operating pressure: | 16 bar |
| Max. inlet pressure: | 8 bar |
| Pump differential pressure: | 2 bar * |
| | * Flow = 0 m ³ /h |

This pump is allowed to start at an inlet pressure of 8 bar, as the outlet pressure is lower than the maximum operating pressure. This results in an operating pressure of 8 + 2 = 10 bar.

If the inlet or operating pressure exceeds the pressure permitted, Grundfos variants meeting your specific requirements may be available on request.

9. Selection

Selection of pumps

Base the selection of pumps on the following parameters:

- duty point of the pump
- sizing data, such as pressure loss as a result of height differences, friction loss in the pipes, pump efficiency
- pump materials
- pump connections
- shaft seal.

Duty point of the pump

From a duty point, you can select a pump on the basis of the curve charts in the section on performance curves and technical data.

Ideally, the duty point should match the best efficiency on the pump curve.

Grundfos Product Center

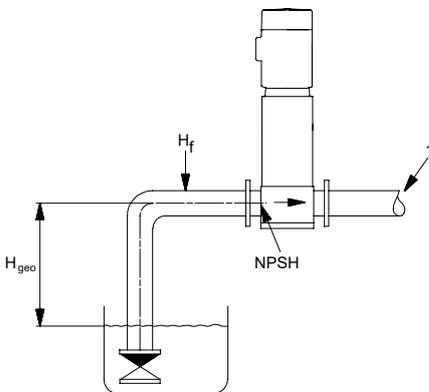

We recommend that you size your pump at the Grundfos Product Center which is a selection program offered by Grundfos.

The Grundfos Product Center features an easy-to-use virtual guide that leads you through the selection of the pump for the application in question.

Sizing data

When sizing a pump, take the following parameters into account:

- required flow rate and pressure at the draw-off point
 - pressure loss as a result of height differences (H_{geo})
 - friction loss in the pipes (H_f)
- It may be necessary to account for pressure loss in connection with long pipes, bends, valves or similar.
- best efficiency at the estimated duty point
 - NPSH value.

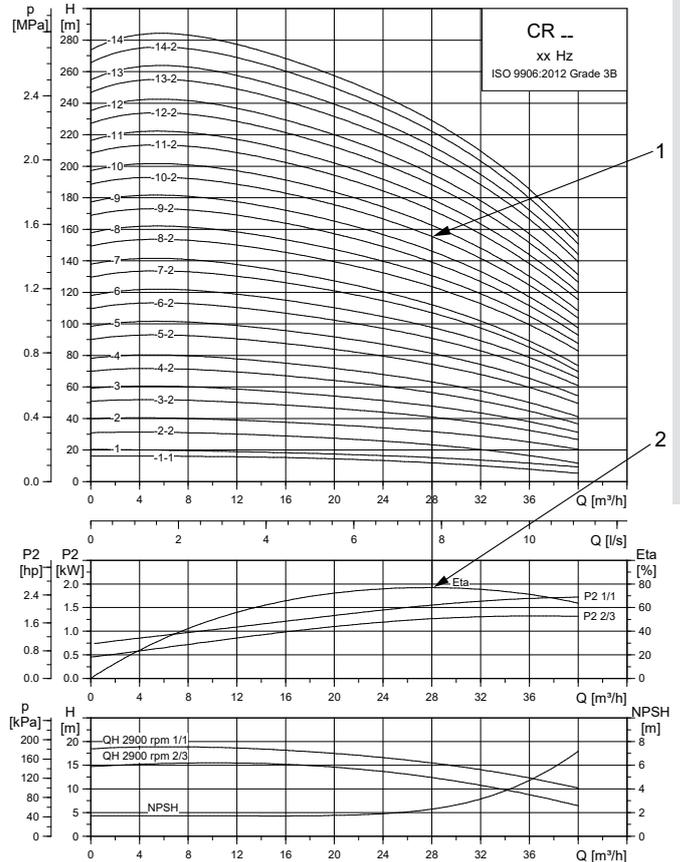

TM026711

Sizing data

| Pos. | Description |
|------|---------------------------------------|
| 1 | Required flow rate, required pressure |

Pump efficiency

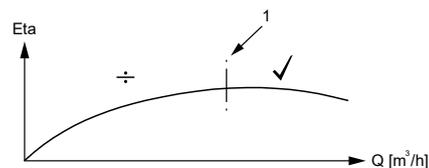

Before determining the best efficiency point, identify the operation pattern of the pump. If you expect the pump to always operate at the same duty point, then select a pump which operates at a duty point corresponding to the best efficiency of the pump.

Example of a CR pump's duty point

| Pos. | Description |
|------|-----------------|
| 1 | Duty point |
| 2 | Best efficiency |

As the pump is sized on the basis of the highest possible flow rate, it is important to always have the duty point to the right of the best efficiency point on the efficiency curve (eta). This must be considered in order to keep the efficiency high when the flow rate drops.

TM009190

Best efficiency

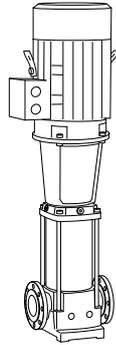

| Pos. | Description |

| 1 | Best efficiency point |

Pump material

Select the material variant on the basis of the liquid to be pumped.

The product range covers the following basic types:

- CR, CRI: Use the CR, CRI pumps for clean, non-aggressive liquids, such as potable water and oils.
- CRN: Use the CRN pumps for industrial liquids and acids. See the section on pumped liquids, or contact Grundfos.

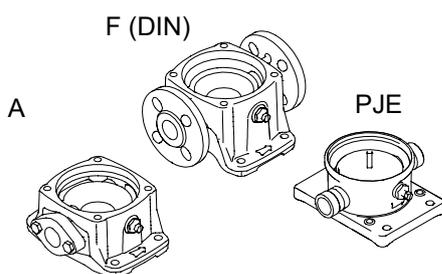

CR pump

Pump connections

Selection of a pump connection depends on the rated pressure and pipes. To meet any requirement, the pumps offer a wide range of flexible connections, such as the following:

- oval flange A (BSP)
- DIN flange
- PJE coupling
- clamp coupling
- union (+GF+)
- other connections on request.

Pump connections

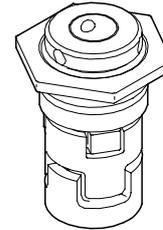

Shaft seal

As standard, the product range is fitted with a Grundfos shaft seal (cartridge type) suitable for the most common applications.

The following key parameters must be taken into account when selecting the shaft seal:

- type of pumped liquid
- liquid temperature

- maximum pressure.

Shaft seal (cartridge type)

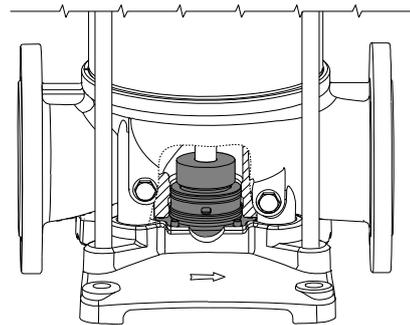

We offer a wide range of shaft seal variants to meet specific demands according to the pumped liquid.

Servicing shaft seals

Replacement shaft seals are available as complete service kits ²⁸⁾.

Shaft seals fitted on CR, CRN 125-155 pumps with Ø28 mm or Ø36 mm shaft ends are serviceable. This means that the wear parts in these shaft seals are available as service kits ²⁸⁾ and can be replaced without having to renew the complete shaft seal.

Thrust handling device

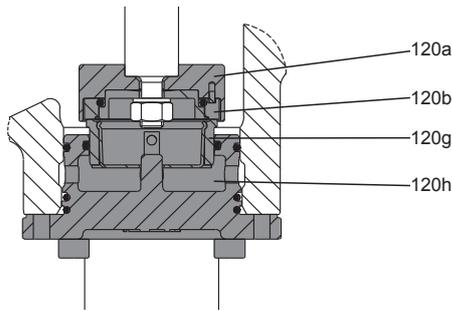

Thrust handling device

A thrust handling device (THD) is factory-fitted on pumps with 75 kW motors or larger. The system consists of two parts. A rotating part mounted on the shaft end below the first impeller as well as a non-rotating part mounted in or on the pump base.

The THD absorbs the main part of the thrust force generated by the impellers and thereby reduces the resulting axial force the motor bearings must absorb. This enables the use of standard ball bearings in the motor instead of special angular contact ball bearings.

Note: For applications involving CIP (clean-in-place) and motors above 55 kW, use a bearing flange and a base without THD.

²⁸⁾ All service kits include detailed instructions on how to carry out the replacement.

Position numbers for THD parts

| Pos. | Description | Material |
|------|-----------------|--|
| 120a | Thrust disc | Stainless steel |
| 120b | Rotating ring | Silicon carbide |
| 120g | Stationary ring | Silicon carbide ²⁹⁾ Tungsten carbide |
| 120h | Lifting plate | Stainless steel |
| - | O-rings | EPDM FKM |

²⁹⁾ On request for CRN.

Operating pressure and inlet pressure

Do not exceed the limit values for the following pressures:

- maximum operating pressure
- maximum inlet pressure.

Minimum inlet pressure, NPSH

We recommend calculating the inlet pressure H in the following situations:

- The liquid temperature is high.
- The flow rate is significantly higher than the rated flow.
- Water is drawn from depths.
- Water is drawn through long pipes.
- The inlet conditions are poor.

To avoid cavitation, make sure that there is a minimum pressure on the inlet side of the pump.

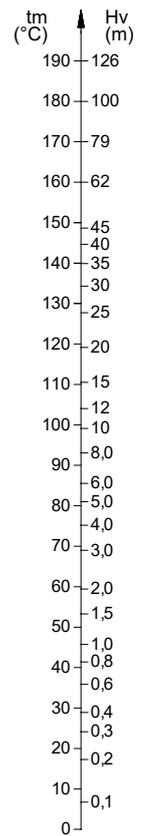

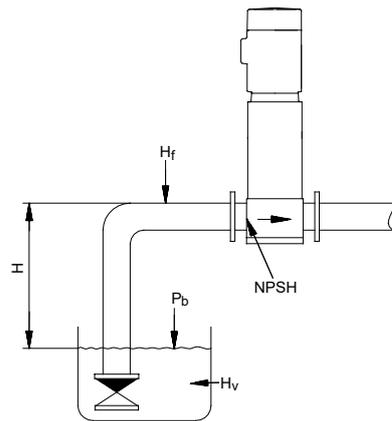

The maximum suction lift H in metres head can be calculated as follows:

| | |
|-------|---|
| H | $p_b \times 10.2 - \text{NPSH} - H_f - H_v$ |
| p_b | Barometric pressure in bar P_b can be set to 1 bar at sea level. In closed systems, p_b indicates the system pressure in bar. |
| NPSH | Net Positive Suction Head in metres head to be read from the NPSH curve at the highest flow rate the pump would be delivering |
| H_f | Friction loss in inlet pipe in metres head at the highest flow rate the pump would be delivering |
| H_v | Vapour pressure in metres head to be read from the vapour pressure scale H_v depends on the liquid temperature t_m . |

If the calculated H is positive, the pump can operate at a suction lift of maximum H metres head.

If the calculated H is negative, an inlet pressure of minimum H metres head is required.

TM069670

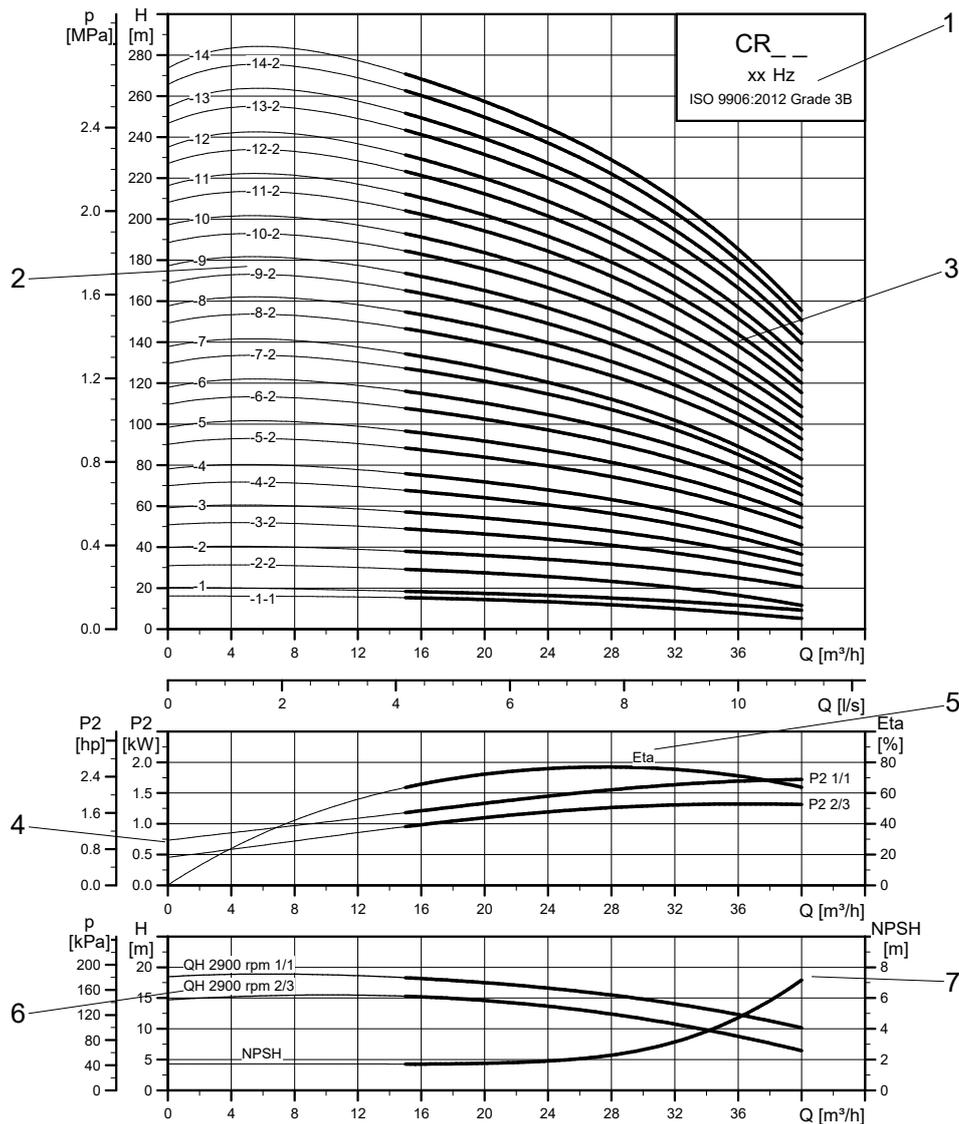

TM027439

Minimum inlet pressure, NPSH

To avoid cavitation, never select a pump with a duty point too far to the right on the NPSH curve.

Always check the NPSH value of the pump at the highest possible flow rate.

How to read the curve charts

TM078855

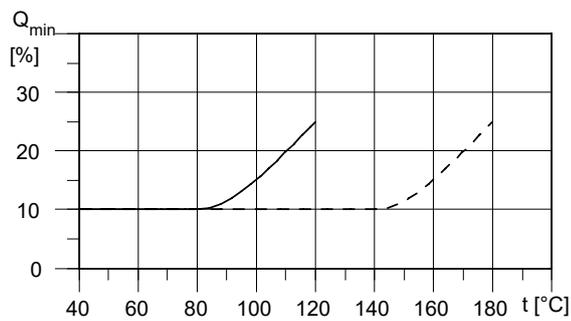

| Pos. | Description |
|------|--|
| 1 | It shows the pump type, frequency, poles or speed as well as the ISO or ANSI standard. |
| 2 | Number of stages. First figure: number of stages. Second figure: number of reduced-diameter impellers. |
| 3 | It is the QH curve of the individual pump with the bold curves indicating the recommended duty range for best efficiency. |
| 4 | The power curves indicate pump input power per stage . Curves are shown for full (1/1) and for reduced-diameter (2/3) impellers. |
| 5 | The eta curve shows the efficiency of a pump with an average number of stages. The efficiency of pumps with reduced-diameter impellers is approximately 2 % lower than the eta curve shown in the chart. |
| 6 | It is the QH for each individual impeller. Curves are shown for full (1/1) and for reduced-diameter (2/3) impellers. |
| 7 | The NPSH curve is a maximum curve for all the variants shown. |

Guidelines to performance curves

The guidelines below apply to the performance curves:

- Tolerances refer to the ANSI or ISO standards, such as ISO 9906:2012, Grade 3B, if indicated on the curve chart.
- The motors used for the measurements are standard Grundfos-specified motors.
- Measurements are made with airless water at a temperature of 20 °C.
- The curves apply to the following kinematic viscosity:
 $\nu = 1 \text{ mm}^2/\text{s}$ (1 cSt).
- Due to risk of overheating, the pumps must not be used at a flow rate below the minimum flow rate.
- The QH curves apply to a rated motor speed of a three-phase mains-operated motor. For realistic curves, go to the Grundfos Product Center at <http://product-selection.grundfos.com>, and insert data.

The curve below shows the minimum flow rate as a percentage of the rated flow rate in relation to the liquid temperature. The dotted line shows a CRN pump fitted with an air-cooled top assembly.

12. List of pumped liquids

A number of typical liquids are listed below.

Other pump versions may be applicable, but those stated in the list are considered to be the best choices.

The table is intended as a general guide only and cannot replace actual testing of the pumped liquids and pump materials under specific working conditions.

Therefore, use the list with some caution. Factors such as those mentioned below may affect the chemical resistance of a specific pump version:

- concentration of the pumped liquid
- liquid temperature
- pressure.

Take safety precautions when pumping dangerous liquids.

Notes

| | |
|---|---|
| D | Often with additives. |
| E | The density and/or viscosity differ from that/those of water. Take this factor into account when calculating motor output and pump performance. |
| F | Pump selection depends on many factors. Contact Grundfos. |
| H | Risk of crystallisation/precipitation in shaft seal. |
| 1 | Highly flammable liquid. |
| 2 | Combustible liquid. |
| 3 | Insoluble in water. |
| 4 | Low self-ignition point. |

35) Flange with 20 mm higher collar. With this collar, the installation dimensions of CR 20 will be identical to those of CR 32. If CR 32 is replaced by CR 20, the base must be raised by 15 mm.

Counterflanges for CRN

Counterflanges for CRN pumps are made of stainless steel EN 1.4401 (≈AISI 316).
A set consists of one counterflange, one gasket, bolts and nuts.

LiqTec

The LiqTec dry-running protection unit protects the pump and process against dry running and temperatures exceeding 130 ± 5 °C. Connected to the motor PTC sensor, LiqTec also monitors the motor temperature.

LiqTec is prepared for DIN rail mounting in control cabinets.

Enclosure class: IPX0.

GRUNDFOS iSOLUTIONS MONITOR

GRUNDFOS iSOLUTIONS MONITOR is a condition-monitoring solution for Grundfos CR and CRE pumps that monitors your pumps and applications for possible failures or deviation from normal (baseline) operation. The integration of condition monitoring into daily maintenance processes helps reducing unscheduled downtime and improves planning of maintenance. It also improves the overall health level of your equipment. The condition-monitoring solution provides operators with increased insights within their installation enabling more solid decisions on coming faults and consumption.

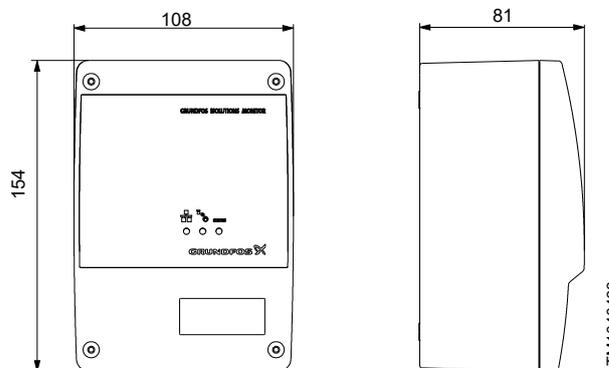

The GRUNDFOS iSOLUTIONS MONITOR solution contains the following items:

- Hardware: unit and antenna for 3G/4G
- VTU sensor with built-in ultrasonic dry-running detection, thermometer and accelerometer
- Cloud subscription based on customer needs
- Installation and commissioning services

The sensor can be integrated with a local PLC system via Modbus RTU and connected to Grundfos iSOLUTIONS CLOUD, including service and support, at the same time.

Adapter kit

| Adapter kit for sensor | | |
|------------------------|------------|----------------|
| Content | Type | Product number |
| Adapter for sensor | G 1/2 EPDM | 99352712 |
| | G 1/2 FKM | 99352737 |

³⁷⁾ Applies to CRN 95.

14. Variants

The variants are available on request.

Although the Grundfos CR, CRI, CRN product range offers a number of pumps for different applications, customers require specific pump solutions to satisfy their needs. See the following documents:

- Grundfos CR "Custom-built pumps" data booklet
- Grundfos "CR, CRN high pressure" data booklet.

Below please find the range of options available for customising the CR pumps to meet the customers' demands.

Contact Grundfos for further information or for requests other than the ones mentioned below.

Motors

| Variant | Description |
|--|---|
| ATEX-approved motor | For operation in hazardous atmospheres, explosion-proof or dust-ignition-proof motors may be required. |
| Motor with anti-condensation heating unit | For operation in humid environments motors with built-in anti-condensation heating unit may be required. |
| Motor with thermal protection | We offer motors with built-in bimetallic thermal switches or temperature-controlled PTC sensors (thermistors) incorporated in the motor windings. |
| Oversize motor | Ambient temperatures above 40 °C or installation at altitudes of more than 1000 metres above sea level require the use of an oversize motor (that is derating). |
| 4-pole motor | We offer 4-pole standard motors. |

Shaft seals

| Variant | Description |
|--|--|
| Shaft seal with FFKM O-ring | We recommend shaft seals with FFKM or FXM O-ring for applications where the pumped liquid may damage the standard O-ring material. |
| Seal with flush, quench seal | We recommend this for applications involving crystallising, hardening or sticky liquids. |
| Air-cooled shaft seal system | We recommend this for applications involving extremely high temperatures. No conventional mechanical shaft seal can withstand liquid temperatures of up to 180 °C for any length of time. For such applications, we recommend Grundfos' unique air-cooled shaft seal system. In order to ensure a low liquid temperature around the standard shaft seal, the pump is fitted with a special air-cooled shaft seal chamber. No separate cooling is required. |
| Double seal with pressure chamber | We recommend this for applications involving poisonous or explosive liquids. It protects the surrounding environment and the people working in the vicinity of the pump. It consists of two seals mounted in a "back-to-back" arrangement inside a separate pressure seal chamber. As the pressure in the chamber is higher than the pump pressure, leakage is prevented. A dosing pump or a special pressure intensifier generates the seal chamber pressure. |
| CR MAGdrive | Magnetically driven pumps for industrial applications. Key applications are industrial processes involving the handling of aggressive, environmental, dangerous or volatile liquids, such as organic compounds and solvents. |

Pumps

| Variant | Description |
|--|---|
| Horizontally mounted pump | For safety or height reasons, certain applications, for instance on ships, require the pump to be mounted in horizontal position. For easy installation, the pump is fitted with brackets that support motor and pump. |
| Low-temperature pump | Exposed to temperatures down to -40 °C, coolant pumps may require neck rings with a different diameter in order to prevent impeller drag. |
| High-pressure pump up to 47 bar | For high-pressure applications, we offer a unique double pump system capable of generating a pressure of up to 47 bar. |
| Low-NPSH pump (improved suction) | We recommend this for boiler-feed applications where cavitation may occur due to poor inlet conditions. |
| Pump with bearing flange | The bearing flange is suitable for applications where the inlet pressure is higher than the maximum pressure recommended. The bearing flange increases the life of motor bearings. We recommend this for standard motors. |
| Belt-driven pump | Belt-driven pumps are designed to operate in places with limited space or where no electrical power is available. |
| Pump for pharmaceutical and biotechnological applications | CRN pumps are designed for applications requiring the sterilisation and CIP capability of pipes, valves and pumps. (CIP = clean-in-place.) |

Connections and other variants

| Variant | Description |
|-----------------------------|--|
| Pipe connections | In addition to the wide range of standard flange connections, a 16-bar DIN standard clamping flange is available. Customised flanges are available according to specifications. |
| TriClamp connection | TriClamp connections are of a hygienic design with a sanitary coupling for use in the pharmaceutical and food industry. |
| Electropolished pump | To substantially reduce the risk of corrosion of the materials, we offer electropolished pumps. We recommend this for applications in the pharmaceutical and food industry. |

15. Grundfos Product Center

Online search and sizing tool to help you make the right choice.

From the international view, you can select your specific country to view the product range available to you.

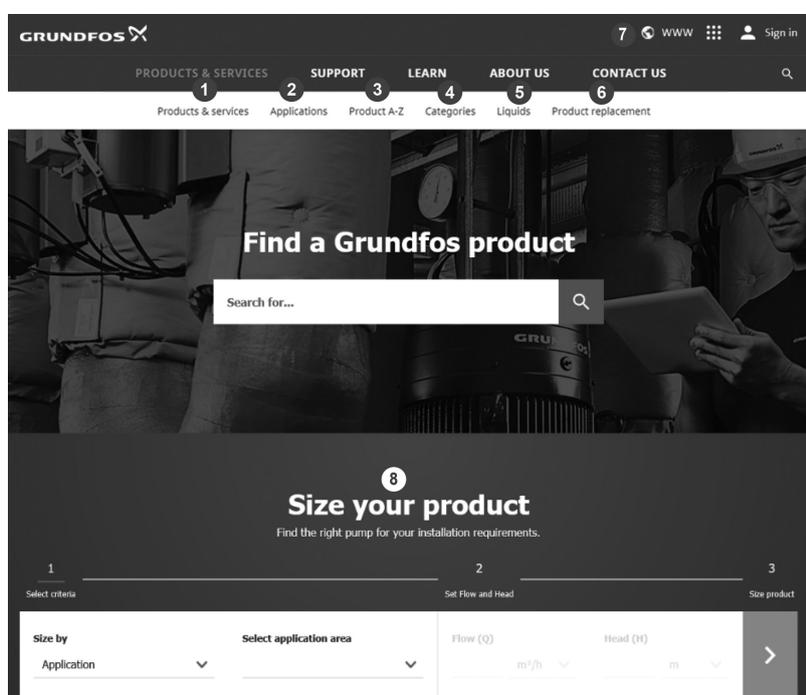

International view: <https://product-selection.grundfos.com>

All the information you need in one place

Performance curves, technical specifications, pictures, dimensional drawings, motor curves, wiring diagrams, spare parts, service kits, 3D drawings, documents, system parts. The Product Center displays any recent and saved items - including complete projects - right on the main page.

Downloads

On the product pages, you can download installation and operating instructions, data booklets, service instructions, etc., in PDF format.

When you select your country, you will see the menus below. Note that some menus may not be available depending on the country.

Example: <https://product-selection.grundfos.com/uk>

| Pos. | Description |
|------|---|
| 1 | Products & services enables you to find products and documents by typing a product number or name into the search field. |
| 2 | Applications enables you to choose an application to see how Grundfos can help you design and optimise your system. |
| 3 | Products A-Z enables you to look through a list of all the Grundfos products. |
| 4 | Categories enables you to look for a product category. |
| 5 | Liquids enables you to find pumps designed for aggressive, flammable or other special liquids. |
| 6 | Product replacement enables you to find a suitable replacement. |
| 7 | WWW enables you to select the country, which changes the language, the available product range and the structure of the website. |
| 8 | Sizing enables you to size a product based on your application and operating conditions. |
