■ Original safety instructions

These safety instructions give a quick overview of the safety precautions to be taken in connection with any work on this product. Observe these safety instructions during handling, installation, operation, maintenance, service and repair of this product. These safety instructions are a supplementary document, and all safety instructions will appear again in the relevant sections of the installation and operating instructions. Keep these safety instructions at the installation site for future reference.

General information

 Read this document before you install the product. Installation and operation must comply with local regulations and accepted codes of good practice.

 This appliance shall not be used by children.

Children shall not play with the appliance. Cleaning and user maintenance shall not be carried out by children.

Appliances can be used by persons with reduced physical, sensory, or mental capabilities, as well as persons with a lack of experience and knowledge. This requires that they are given supervision or instruction concerning the use of the appliance in a safe way and that they understand the hazards involved.

Hazard statements

The symbols and hazard statements below may appear in Grundfos installation and operating instructions, safety instructions and service instructions.

DANGER

 Indicates a hazardous situation which, if not avoided, will result in death or serious personal injury.

WARNING

 Indicates a hazardous situation which, if not avoided, could result in death or serious personal injury.

CAUTION

 Indicates a hazardous situation which, if not avoided, could result in minor or moderate personal injury.

The hazard statements are structured in the following way:

SIGNAL WORD

Description of the hazard

- Consequence of ignoring the warning
- Action to avoid the hazard.

Notes

The symbols and notes below may appear in Grundfos installation and operating instructions, safety instructions and service instructions.

Observe these instructions for explosion-proof products.

A blue or grey circle with a white graphical symbol indicates that an action must be taken.

A red or grey circle with a diagonal bar, possibly with a black graphical symbol, indicates that an action must not be taken or must be stopped.

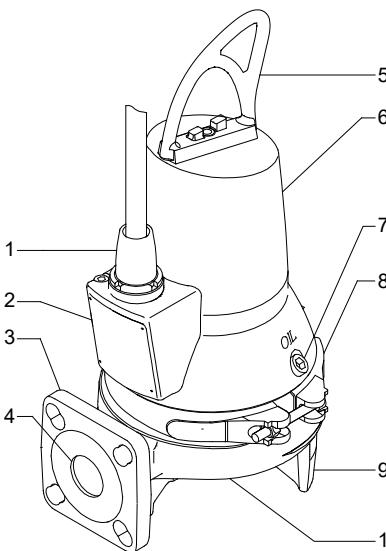

If these instructions are not observed, it may result in malfunction or damage to the equipment.

Tips and advice that make the work easier.

Potentially explosive environments

Use explosion-proof pumps for applications in potentially explosive environments.

The pumps must under no circumstances pump combustible or flammable liquids.

The classification of the installation site must comply with local rules.

Before the first startup and after a long standstill period, make sure that the pump is filled with the pumped liquid.

The letter X in the certificate number indicates that the equipment is subject to special conditions for safe use. The conditions are mentioned in the certificate and in this installation and operating instructions.

Special conditions for safe use of explosion-proof pumps:

1. Bolts used for replacement must be class A2-70 or better according to EN/ISO 3506-1.
2. The pump must not run dry. The level of pumped liquid must be controlled by two stop level switches connected to the motor control circuit. The pumps can only be used completely submerged.
3. Make sure that the cable is securely connected to the terminal board placed outside the potentially explosive area. The power cable plug can only be disconnected by the manufacturer or his representative.

4. The thermal protector in the stator windings has a rated cut-out temperature of 150 °C ensuring the disconnection of the power supply. The power supply must be reset manually.
5. The IP68 rating is limited to a maximum of 10 m submersion depth.
6. The temperature range is limited to -20 to +40 °C for ambient temperature and 0-40 °C for liquids.
7. Contact the manufacturer regarding the "d" protection type for pumps and for information on the dimensions of the flameproof joints.
8. The lock nut of the cable connector must only be replaced with an identical one.
9. Compliance with the standards EN 60079-14, EN 60079-17, and EN 60079-19 is a customer responsibility.

Transporting the product

CAUTION

Crushing hazard

Minor or moderate personal injury

- Make sure the pump cannot roll or fall over.

Handling and lifting the product

WARNING

Crushing hazard

Death or serious personal injury

- Do not stack pump packages or pallets on top of each other when lifting or moving them.
- Always lift the pump by its lifting bracket or by a forklift truck if the pump is fixed on a pallet. Never lift the pump by the power cable, hose, or pipe.

CAUTION

Sharp element

Minor or moderate personal injury

- Wear protective gloves when opening the pump package.

DANGER

Crushing hazard

Death or serious personal injury

- Make sure that the lifting bracket is tightened before lifting the pump.

WARNING

Crushing hazard

Death or serious personal injury

- When lifting the pump, make sure your hand cannot be caught between the lifting bracket and the hook.

WARNING

Crushing hazard

Death or serious personal injury

- Make sure that the hook is fixed properly to the lifting bracket.
- Always lift the pump by its lifting bracket or by a forklift truck if the pump is fixed on a pallet.
- Never lift the pump by the power cable, hose, or pipe.
- Make sure that the lifting bracket is tightened before lifting the pump.

Installing the product

Do not install the pump more than 2000 metres above sea level.

Compliance with the standard EN 60079-14 is a customer responsibility.

Pump installation in pits must be carried out by specially trained persons.

Work in or near pits must be carried out according to local regulations.

Persons must not work in the installation area when the atmosphere is explosive.

DANGER

Electric shock

Death or serious personal injury

- It must be possible to lock the main switch in position 0. Type and requirements as specified in EN 60204-1.

DANGER

Electric shock

Death or serious personal injury

- Make sure there is at least 3 m free cable above the maximum liquid level.

Mechanical installation

Make sure the pit bottom is even before installing the product.

DANGER

Electric shock

Death or serious personal injury

- Switch off the power supply and lock the main switch in position 0.
- Switch off any external voltage connected to the product before working on it.

CAUTION

Hot surface

Minor or moderate personal injury

- Make sure that the pump has cooled down before touching it.

DANGER

Electric shock

Death or serious personal injury

- Before installing the pump and starting it up for the first time, check the power cable for visible defects to avoid short circuits.

CAUTION

Biological hazard

Minor or moderate personal injury

- Flush the pump thoroughly with clean water and rinse the pump parts after dismantling. Pits may contain sewage or wastewater with toxic and/or contagious substances.
- Wear appropriate personal protective equipment and clothing.
- Observe the local hygiene regulations in force.

The pump must be installed in a vertical position, in both auto-coupling or free-standing submerged installation.

Always use Grundfos accessories to avoid malfunctions due to incorrect installation.

Only use the lifting bracket for lifting the pump. Do not use it to hold the pump during operation.

CAUTION

Crushing hazard

Minor or moderate personal injury

- Do not put your hands or any tool into the pump inlet or outlet port after the pump is connected to the power supply unless it is switched off by removing the fuses or switching off the main switch.
- Make sure that the power supply cannot be switched on unintentionally.

CAUTION

Sharp element

Minor or moderate personal injury

- Do not touch the sharp edges of the impeller, grinder head, and grinder ring without wearing protective gloves.

CAUTION

Biological hazard

Minor or moderate personal injury

- Make sure to seal the pump outlet properly when fitting the outlet pipe, otherwise, water may spray out.

Installation on auto coupling

Before installation, make sure that the atmosphere in the pit is not potentially explosive.

Make sure that the pipes are installed without undue force. No loads from the weight of the pipes must be carried by the pump.

Do not use elastic elements or bellows in the pipes. Never use these elements to align the pipes.

The free end of the cable must not be submerged as water may penetrate through the cable into the motor.

Free-standing, submerged installation

The free end of the cable must not be submerged, as water may penetrate into the cable.

If several pumps are installed in the same pit, the pumps must be installed at the same level to ensure optimum pump alternation.

Electrical connection

DANGER Electric shock

Death or serious personal injury

- Connect the pump to an external main switch which ensures all-pole disconnection with a contact separation according to EN 60204-1.
- It must be possible to lock the main switch in position 0.

Pumps installed in potentially explosive locations must be connected to a control box with a motor protection relay with IEC trip class 10.

The permanent installation must be fitted with an earth-leakage circuit breaker.

Do not install Grundfos control boxes, pump controllers, Ex barriers, and the free end of the power cable in potentially explosive environments.

The classification of the installation site must comply with local rules.

On explosion-proof pumps, make sure that an external earth conductor is connected to the external earth terminal of the pump using a conductor with a secure cable clamp. Clean the surface of the external earth connection and fit the cable clamp.

The cross-section of the earth conductor must be at least 4 mm², such as type H07 V2-K (PVT 90°) yellow and green.

Make sure that the earth connection is protected against corrosion.

Make sure that all protective equipment is connected correctly.

Float switches used in potentially explosive environments must be approved for this application. They must be connected to the pump controller by an intrinsically safe barrier to ensure a safe circuit.

DANGER Electric shock

Death or serious personal injury

- If the power cable is damaged, it must be replaced by the manufacturer, his service agent, or a similarly qualified person.

Set the motor-protective circuit breaker to the rated current of the pump. The rated current is stated on the nameplate.

DANGER Electric shock

Death or serious personal injury

- Before the first startup of the pump, check the power cable for visible defects to avoid short circuits.

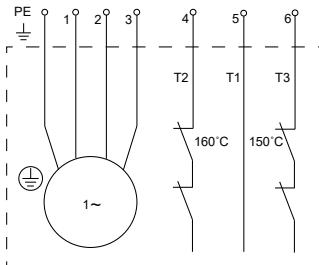

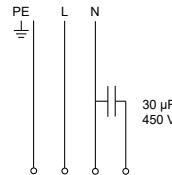

A possible replacement of the power cable must be carried out by Grundfos or an authorised workshop.

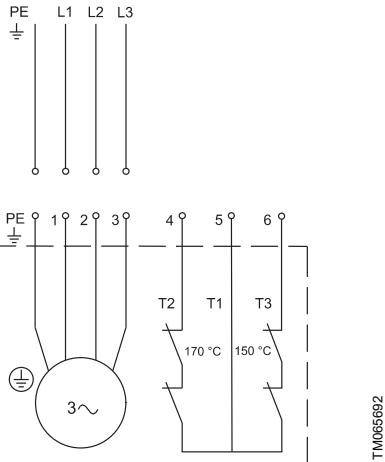

In case of single-phase pumps, an LC 241 or LC 242 controller must be used to comply with household standards.

Wiring diagrams

Wiring diagram for single-phase pumps

Wiring diagram for three-phase pumps

Pump controllers

The liquid level can be controlled by the Grundfos LC 231 and LC 241 level controllers. The pumps are protected by thermal switches connected to the LC controller or a CU 100 control unit.

LC level controllers

Suitable level controllers:

- LC 231: compact solution with certified motor protection for single- and dual-pump versions.
- LC 241: cabinet solution offering modularity and customisation for single- and dual-pump versions.
- Dedicated Controls (DC): high-end cabinet solution for multi-pump versions up to 6 pumps.

In the following description, "level switches" can be air bells, float switches, or electrodes depending on the selected pump controller.

Depending on the security and the number of the pumps, level switches can be used in the following setups:

- Dry run (optional)
- Stop
- Start pump 1 (single-pump version)
- Start pump 2 (dual-pump version)
- High level (optional)

An analogue level transmitter can be used and all levels can be customised. Level switches can be used with a level transmitter (one for dry and one for high level).

When installing the level switches, observe the following:

- To prevent air intake and vibrations, install the stop level switch so the pump is stopped before the liquid level is lowered to the middle of the motor housing.
- Install the start level switch so the pump is started at the required level. The pump must always be started before the liquid level reaches the bottom inlet pipe.
- Always install the high-level alarm switch about 10 cm above the start level switch. However, the alarm must always be given before the liquid level reaches the inlet pipe.

For further settings, see the installation and operating instructions for the selected level controller.

The pump must not run dry.

Install an additional level switch to ensure that the pump is stopped in case the stop level switch is not operating.

The pump must be stopped when the liquid level reaches the upper edge of the clamp.

Float switches used in potentially explosive environments must be approved for this application. They must be connected to the Grundfos LC 231 or LC 241 level controller by an intrinsically safe barrier to ensure a safe circuit. In potentially explosive environments, the anti-seizing function must be disabled on pump controllers.

Thermal switches

All pumps have two sets of thermal switches incorporated in the stator windings.

The thermal switch in circuit 1 (T1-T3) breaks the circuit at the following approximate winding temperatures:

- 150 °C for three-phase pumps
- 125 °C for 1.5 kW, single-phase pumps.

This thermal switch must always be connected (T1-T3), and the pump must be switched off in case of thermal cutout.

The thermal switch in circuit 2 (T1-T2) breaks the circuit at the following approximate winding temperatures:

- 170 °C for three-phase pumps
- 160 °C for single-phase pumps
- 135 °C for 1.5 kW, single-phase pumps.

After thermal cutout, explosion-proof pumps must be restarted manually.

The thermal switch in circuit 2 (connection T1-T2) must be connected for manual restarting of these pumps.

The maximum operating current and voltage of the thermal switches is 0.5 A at 500 VAC and $\cos \varphi$ 0.6. The switches must be able to break a coil in the supply circuit.

When the thermal switches in standard pumps close the circuit after cooling, the pump is restarted automatically by the controller.

DANGER Explosive environment

Death or serious personal injury

- Do not install the separate motor-protective circuit breaker or control unit in potentially explosive environments.

Moisture switch

Moisture switch is available as an option. In case of a moisture switch version, the sensor is connected to circuit 2 (T1-T2) in serial.

It opens if moisture is detected and breaks an electric circuit. The pump must be switched off and checked.

The maximum current and voltage on the moisture switches are limited to 0.5 A and 250 V.

CU 100 control unit

CU 100 incorporates a motor-protective circuit breaker and is available with level switch and cable.

Single-phase pumps

Connect a run and start capacitor to the control unit. For capacitor sizes, see the table below:

Pump type	CS, starting capacitor		CR, run capacitor		
	[kW]	[μ F]	[V]	[μ F]	[V]
0.9 and 1.2	150	230	30	450	
1.5	150	230	40	450	

Frequency converter operation

Grundfos SEG pumps are designed for frequency converter operation. However; due to application reasons, frequency converter operation is not recommended.

To avoid sedimentation in the pipes, operate the speed-controlled pump at above 1 m/s flow rate.

For frequency converter operation, observe the following:

- Before installing a frequency converter, calculate the lowest permissible frequency in the installation to avoid zero flow.
- Do not reduce the motor speed to less than 35 Hz.
- Let the pump run at the rated speed at least 2-3 times a day for 5-10 minutes to prevent sedimentation in the pump and the piping system.

- Keep the flow velocity above 1 m/sec.
- Let the pump run at the rated speed at least once a day to prevent sedimentation in the piping system.
- Do not exceed the frequency indicated on the nameplate. Neglecting this poses the risk of motor overload.
- Keep the power cable as short as possible. The peak voltage increases with the length of the power cable. See the data sheet of the selected frequency converter.
- Use input and output filters on the frequency converter. See the data sheet of the selected frequency converter.
- Use screened power cable if there is a risk that electrical noise can disturb other electrical equipments. See the data sheet of the selected frequency converter.
- The thermal protection of the motor must be connected.
- The minimum switching frequency is 2.5 kHz.
- Peak voltage and dU/dt must be in accordance with the table below. The values stated are maximum values supplied to the motor terminals. The cable influence is not taken into account. See the frequency converter data sheet regarding the actual values and the cable influence on the peak voltage and dU/dt .

Maximum repetitive peak voltage [V]	Maximum dU/dt U_N 400 V [V/ μ sec.]
850	2000

- In case of an Ex-approved pump, check if the Ex certificate of the specific pump allows the use of a frequency converter.
- Set the frequency converter U/f ratio according to the motor data.
- Local regulations and standards must be fulfilled.

When operating the pump by a frequency converter, consider the following:

- The locked-rotor torque will be lower, depending on the frequency converter type. See the installation and operating instructions of the selected frequency converter.
- Frequency converter use can increase the wear on the shaft seal and bearings.
- The noise level may increase. See the installation and operating instructions of the selected frequency converter.

Frequency converter use may reduce the lifespan of the bearings and the shaft seal, depending on operating mode and other circumstances.

Information about pump speed/torque curves, when operated by frequency converter, can be found on the Grundfos Product Center at <https://product-selection.grundfos.com>.

For further information about the frequency converter operation, see the data sheet and the installation and operating instructions for the selected frequency converter.

Startup

CAUTION

Crushing of hands

Minor or moderate personal injury

- Do not put your hands or any tool into the pump inlet or outlet port after the pump is connected to the power supply unless it is switched off.
- Make sure that the power supply cannot be switched on unintentionally.

CAUTION

Biological hazard

Minor or moderate personal injury

- Make sure to seal the pump outlet properly when fitting the outlet pipe, otherwise water may spray out of the sealing.

WARNING

Crushing hazard

Death or serious personal injury

- When lifting the pump, make sure your hand cannot be caught between the lifting bracket and the hook.

DANGER

Crushing hazard

Death or serious personal injury

- Make sure that the hook is fixed properly to the lifting bracket.
- Always lift the pump by its lifting bracket or by a forklift truck if the pump is fixed on a pallet.
- Never lift the pump by the power cable, hose, or pipe.
- Make sure that the lifting bracket is tightened before lifting the pump.

DANGER

Electric shock

Death or serious personal injury

- Before starting up the product for the first time, check the power cable for visible defects to avoid short circuits.
- If the power cable is damaged, it must be replaced by the manufacturer, his service agent, or a similarly qualified person.
- Make sure that the product is earthed properly.
- Switch off the power supply and lock the main switch in position 0.
- Switch off any external voltage connected to the product before working on it.

CAUTION

Biological hazard

Minor or moderate personal injury

- Flush the pump thoroughly with clean water and rinse the pump parts after dismantling. Pits may contain sewage or wastewater with toxic and/or contagious substances.
- Wear appropriate personal protective equipment and clothing.
- Observe the local hygiene regulations.

CAUTION

Hot surface

Minor or moderate personal injury

- Do not touch the surface of the pump while it is running.

Do not open the clamp while the pump is running.

General startup procedure

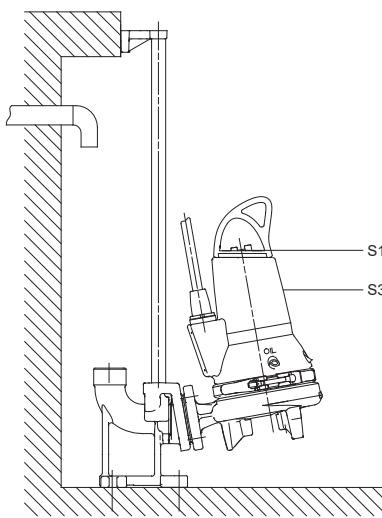

The pump must not run dry.

If the environment is potentially explosive, use only Ex-approved pumps.

Operating modes

The pumps are designed for intermittent operation (S3). When completely submerged in the pumped liquid, the pumps can also operate continuously (S1).

Operating levels

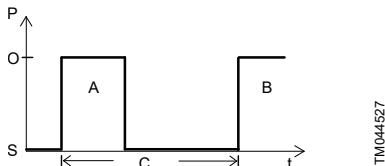

Explosion-proof pumps must not be used lower than the S1 level as shown above.

S3, intermittent operation

S3 operation is a series of 10-minute duty cycles (TC): the pump must run for a maximum of 4 minutes and stop for a minimum of 6 minutes. Thermal equilibrium is not reached during the cycle.

In this operating mode, the pump is partly submerged in the surrounding liquid. The minimum liquid level is at the top of the cable entry.

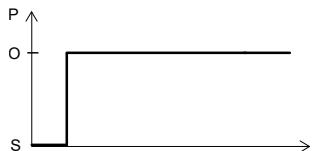

S3 operation

Pos.	Description
O	Operation
S	Stop
TC	Duty cycle

S1, continuous operation

In this operating mode, the pump can operate continuously without being stopped for cooling. When the pump is completely submerged, it is sufficiently cooled by the surrounding liquid.

Start and stop levels

The level difference between start and stop can be adjusted by changing the free cable length of the float switch.

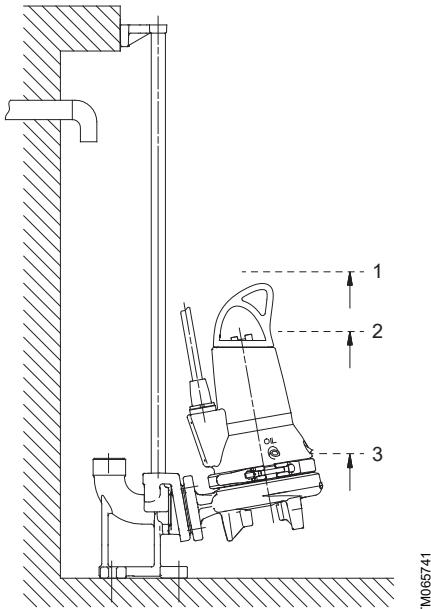

Long free cable = large difference in level.

Short free cable = small difference in level.

- Install the stop level switch to prevent air intake and vibrations, so the pump is stopped before the liquid level is lowered to the upper edge of the clamp.
- Install the start level switch, so the pump is started at the required level. The pump must always be started before the liquid level reaches the bottom inlet pipe to the pit.

CU 100 must not be used for Ex applications.

**CAUTION****Pressurised system**

Minor or moderate personal injury

- The oil chamber may be under pressure. Loosen the screws carefully and do not remove them until the pressure has been fully relieved.

All service work must be carried out by Grundfos or an authorised service workshop approved for servicing explosion-proof products.

Minor or moderate personal injury

- Flush the pump thoroughly with clean water and rinse the pump parts after dismantling.

Maintenance

Compliance with the standards EN 60079-17 and EN 60079-19 is a customer responsibility.

Inspect pumps running normal operation every 3000 operating hours or at least once a year. If the dry-solids content of the pumped liquid is very high or sandy, check the pump at shorter intervals.

Check the following:

- **Oil level and condition**

When the pump is new or after replacement of the shaft seal, check the oil level after one week of operation.

Use Shell Ondina X420 oil or equivalent type. Oil auto-ignition temperature must be above 180 °C.

- **Cable entry**

Make sure that the cable entry is watertight and the cables are not sharply bent or pinched.

- **Pump parts**

Check the wearing parts and replace the defective ones.

- **Ball bearings**

Check the shaft for noisy or heavy operation by turning the shaft by hand. Replace defective ball bearings.

A general overhaul of the pump is usually required in case of defective ball bearings or poor motor function. This work must be carried out by Grundfos or an authorised service workshop. Bearings are lubricated for a lifetime.

- **Grinder system and parts**

In case of frequent choke-ups, check the grinder system for visible wearing. If necessary, replace the grinder system.

Dispose of used oil in accordance with local regulations.

Oil check and change

Change the oil in the oil chamber every 3000 operating hours or at least once a year or if the shaft seal is replaced. The table below indicates the oil quantity in the oil chamber.

In case of the drained oil contains water, check and replace the shaft seal.

Pump type	Quantity of oil in the oil chamber [l]
SEG up to 1.5 kW	0.17
SEG 2.6 - 4.0 kW	0.42

CAUTION

Pressurised system

Minor or moderate personal injury

- The oil chamber may be under pressure. Loosen the screws carefully and do not remove them until the pressure is completely relieved.

Fault finding the product

Observe all regulations applying to pumps installed in potentially explosive environments.
Make sure that no work is carried out in a potentially explosive atmosphere.

Before diagnosing any fault, make sure the following:

- The fuses are removed or the main switch is switched off.
- The power supply cannot be switched on unintentionally.
- All rotating parts have stopped moving.

Technical data

Operating conditions

SEG pumps are designed for intermittent operation (S3). When completely submerged in the pumped liquid, the pumps can also operate continuously (S1).

Operating pressure	Maximum 6 bar
Number of starts per hour	Maximum 30
pH value	In permanent installations, between 4 and 10

Installation depth

Maximum 20 m below liquid level.

Replacing the grinder system

CAUTION

Sharp element

Minor or moderate personal injury

- Wear protective gloves when touching the sharp edges of the impeller, grinder head, and grinder ring.

Storage

A product that is not indicated to be protected against freezing shall not be left outside in freezing weather conditions.

Ensure a minimum power cable length of the installation depth plus 3 meters.

Liquid temperature

0-40 °C.

For short periods (maximum 10 minutes), a temperature of up to 60 °C is permissible. This applies to standard versions only.

Explosion-proof pumps must never pump liquids at a temperature higher than 40 °C.

Ambient temperature

The allowed ambient temperature is -20 to +40 °C.

For explosion-proof pumps with WIO sensor, the ambient temperature at the installation site must be within 0-40 °C.

Density of the pumped liquid

When pumping liquids with a density and/or a kinematic viscosity higher than water, use motors with correspondingly higher outputs.

Sound pressure level

The sound pressure level of the pumps is lower than the limiting values stated in the EC Council directive 2006/42/EC relating to machinery.

Electrical data

Power supply	1 x 230 V - 10 ± 6 %, 50 Hz 3 x 230 V - 10 ± 6 %, 50 Hz 3 x 400 V - 10 ± 6 %, 50 Hz
Enclosure class	IP68, according to IEC 60529
Insulation class	F (155 °C)

Disposing of the product

This product or parts of it must be disposed of in an environmentally sound way.

1. Use the public or private waste collection service.
2. If this is not possible, contact the nearest Grundfos company or service workshop.

The crossed-out wheelie bin symbol on a product means that it must be disposed of separately from household waste. When a product marked with this symbol reaches its end of life, take it to a collection point designated by the local waste disposal authorities. The separate collection and recycling of such products will help protect the environment and human health.

See also end-of-life information at www.grundfos.com/product-recycling.
