Product compatibility

- Multistage: CRE, CRIE, CRNE, MTRE, MTSE, MTHE, SPKE, CME
- Singlestage: TPE2, TPE3, TPE, TPED, NKE, NBE
- Systems: Hydro MPC-E, Hydro Multi-E, Hydro Solo-E, CMBE home booster.

MGE is a dedicated motor-drive system for pumps. Pumps equipped with MGE motors overcome application challenges and save energy in a variety of pump installations to reach the lowest Life Cycle Cost (LCC) possible.

Integrated drives

Integrated drives are beneficial and are installed on non-controlled pumps at no extra cost. Once the mains are connected and the pump is fitted into the pipe system, they are ready to operate at the desired setpoint.

Operating pumps with MGE also reduces the CAPEX (capital expense) of additional cabinets, components and facility space by having the entire pump system in line with the pipe system.

MGE is the result of the effective motor technology of Grundfos and it is an efficient IE5 motor, that minimises OPEX (operating expense).

Robustness throughout the system

The Grundfos full line supply of components, from mains connections to pipe fittings, provides the most robust solutions:

- Built-in protection against
 mains supply disturbances,
 environment and motor load
- No cooling fans in drive (wear part).
- MGE is designed to mitigate bearing currents.

Grundfos iSOLUTIONS

Grundfos iSOLUTIONS delivers the optimal combination of pumps, drives and auxiliary components for the specific application, incorporating special features and functions and building on application knowledge and experience.

Grundfos iSOLUTIONS allows easy integration of pumps, drives, measurements, controls, protections and communication, saving you valuable engineering, installation and commissioning time. To learn more, visit the Grundfos iSOLUTIONS website: http://

MGE product range

Supply voltage [V]	Power P2 [kW]
1 × 200-240 ¹⁾	0.25 - 1.5
3 × 200-240	1.1 - 11
3 × 380-500	0.25 - 26
3 x 380-480	15 - 26

1) Available with different specifications.

Features and benefits

Feature	Benefit				
Application control					
Control modes	Easy commissioning to match system design criteria.				
Multipump function including alternating, backup, or cascade	Removes the need for external controllers and continuous operation by redundant pump and sensor if either component fails.				
Differential pressure or temperature with 2 sensors	Lower CAPEX by common inexpensive sensor types.				
Pump curve adjustments, power control and running at power limit	Stabilises unstable pump curves and extends operating range.				
Setpoint influence	Adapts the setpoint and speed according to the external controller.				
STO - Safe Torque Off	Conformity to PLe and SIL3. ²⁾				
Energy s	saving for lower OPEX				
AUTOADAPT or FLOWLIMIT	Continuously adapts to the most efficient curve and reduces pressure loss in the system.				
Low-flow stop function	Improved energy optimisation and comfort.				
Permanent-magnet synchronous motor with IE5 (in accordance with IEC 60034-30-2)	IE5 motor loss is more than 30 % lower than IE3. This alone reduces energy consumption by 10 % with a typical pump load profile.				
Con	dition monitoring				
Limit exceed function	Any value can be supervised to protect the system.				
Loss of prime and dry running	Protects the shaft seal.				
Cavitation protection	Protects the impellers.				
Flow estimate and heat energy monitor	Monitoring of the heating system's performance.				
Overload and temperature	Protects the frequency converter and motor.				
Stop at minimum speed	Protects the pump and saves energy.				
Motor bearings monitor	Ensures uptime by preventive maintenance.				
	Robustness				
Operating temperature between 20 °C and 60 °C	Allows installation almost anywhere and high margins in control rooms, resulting in longer product service life.				
Impulse transient resistance (VDE0160 compliant)	Resistance against lightning, ESD, switching impulses and utility fault clearing.				
Interruptions and voltage sags (SEMIF47 compliant)	Keeps process running and derates the pump to the available power.				
Line harmonics resistance (EN 61000-4-13, class 3)	Built-in compensation of disturbance to avoid overheating of motor windings and maintaining a steady pump operation.				
Built-in RFI filters	Neglects the need for external components.				
IP55 / IP66 enclosures	Installed in-line of pipe system at no added cost.				

2) PL= Performance Level

SIL= Safety Integration Level

Sensors

MGE is sensor-independent and controls the pump to any measured feedback. Grundfos offers several sensors to be used in pump solutions:

- Pressure sensors
- Differential temperature
- Temperature sensors
- sensorsFlowmeters
- Differential pressure sensors
- Grundfos Direct Sensor

Grundfos GO and GO Link

Grundfos GO

Grundfos GO for iOS and Android ensures easy and quick commissioning, monitoring and servicing of pumps with MGE motors.

Grundfos GO Link

Grundfos GO Link for Windows ensures easy and quick commissioning, monitoring and servicing of pumps with MGE motors.

Technical specifications

Motor data					
Speed range	Operating range (rpm)	Constant power (rpm)	Constant torque (rpm)		
LS = Low speed	180-2000/2200	1450-2000/2200	900-1450
