Applications

Reliable and cost-efficient, CRT pumps handle a variety of liquids from seawater to sodium hypochlorite.

Excellent corrosion resistance

Titanium is widely used for many industrial applications due to its high resistance to corrosion.

Totally unaffected by corrosive attacks by salt water or marine atmospheres, titanium also has an exceptional resistance to a wide range of acids, alkalis, natural water and industrial chemicals.

The fine corrosion resistance of titanium is due to a stable, protective and strongly adherent oxide film, formed instantly on the metal when a fresh surface is exposed to air or moisture.

Fields of application

Marine environment

- ballast pumps
- washing/cleaning.

Pulp and paper industries

- bleaching solutions.

Offshore industries and refineries

- firefighting
- cooling.

Metal-finishing industries (electroplating)

- copper chloride etching
- ammonium chloride etching.

Power generation plants

- FGD (Flue Gas Desulphurisation).

Food processing, brewing and pharmaceutical industries

- CIP (Cleaning In Place)
- disinfection.

Desalination industries

- reverse osmosis
- distillation.

Chemical processing industries

- chlorine and chlorates
- organic acids
- oxidising acids (nitric acid, chromic acid)
- chloride-containing salts (ferric chloride)
- inhibited reducing acids.

Other

- fish farming
- aquaria
- fun water parks.

Fig. 1 CRT pumps

GR7369

Pump

The CRT(E) 2, 4, 8 and 16 pump is a non-self-priming, vertical, multistage centrifugal pump fitted with a Grundfos standard motor.

The pump consists of a base and a pump head. The pump body and the outer sleeve are fixed between the base and the pump head by means of staybolts. The base has in-line suction and discharge ports. The pump has a maintenance-free mechanical shaft seal with dimensions to DIN 24960.

Motor

MG motors

CRT pumps are fitted with a totally enclosed, fan-cooled, 2-pole Grundfos standard motor with principal dimensions to EN standards.

Electrical tolerances according to EN 60034.

CRT pumps are fitted with three-phase MG motors as standard.

CRT pumps from 0.37 to 2.2 kW are also available with single-phase motors (1 x 220-230/240 V).

See WinCAPS or WebCAPS.

MGE motors

CRTE pumps are fitted with a totally enclosed, fan-cooled, 2-pole frequency-controlled motor with principal dimensions to EN standards.

Electrical tolerances according to EN 60034.

CRTE pumps from 0.37 - 1.1 kW are fitted with single-phase MGE motors as standard.

CRTE pumps from 0.75 - 1.1 kW are also available with three-phase MGE motors. See Win-/WebCAPS.

Electrical data

Materials

| Pos. | Description | Material | EN/DIN | AISI/ASTM |
|------|----------------------|--------------------------------|----------------------------------|-----------------|
| 1 | Pump head | Stainless steel | 1.4308 | ASTM 25B |
| 2 | Pump head cover | Titanium | | ASTM B 265/1993 |
| 3 | Shaft | Titanium | | ASTM B 348/1993 |
| 4 | Impeller | Titanium | | ASTM B 265 |
| 5 | Chamber | Titanium | | ASTM B 265 |
| 6 | Sieve | Titanium | | ASTM B 265 |
| 7 | O-ring for sleeve | EPDM or FKM | | |
| 8 | Base | Titanium | | ASTM B 265 |
| 9 | Neck ring | PTFE | | |
| 10 | Shaft seal | AUUE/AUVU | | |
| 11 | Base plate | Stainless steel | 1.4408 (equal to AISI 316) | CF8M |
| | Rubber parts in pump | Same as in shaft seal EPDM/FKM | | |

Pumped liquids

Thin, non-explosive liquids, not containing solid particles or fibres. The liquid must not attack the pump materials chemically.

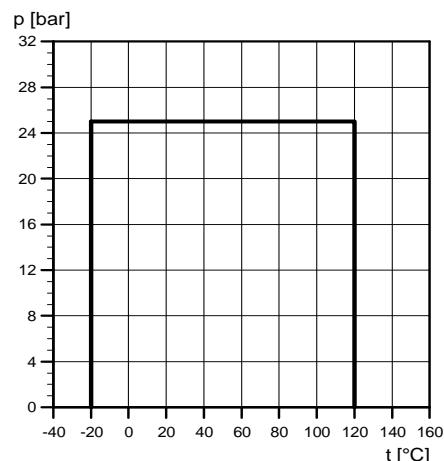

When pumping liquids with a density and/or viscosity higher than that of water, motors with correspondingly higher outputs must be used, if required.

CRT(E) pumps can be used for liquid transfer, circulation and pressure boosting.

Type key

| | |
|--|----------------------------------|
| Example | CR T E 16 - 3 A - P - A - E AUUE |
| Pump range | 16 |
| Vital parts made of titanium | 3 |
| Pump with integrated frequency converter | A |
| Nominal flow rate [m ³ /h] | P |
| Number of impellers | A |
| Code for pump version | E |
| Code for pipe connection | |
| Code for materials, excl. plastic and rubber parts (A = basic version) | |
| Code for neck ring material | |
| Code for shaft seal and plastic/rubber parts, excl. neck ring | |

Maximum operating pressure and temperature limits

p = Maximum operating pressure

Fig. 3 Operating pressure and temperature limits

Note: Liquid temperatures above 90 °C may involve the risk of periodic noise from the shaft seal.

TM01 4869 0204

Maximum inlet pressure

The following table shows the maximum permissible inlet pressure. However, the actual inlet pressure + the pressure against a closed valve must always be lower than the maximum permissible operating pressure.

| 50 Hz | | [bar] | 60 Hz | | [bar] |
|-------------|-------|-------|-------------|-------|-------|
| CRT(E) 2-2 | 2-11 | 10 | CRT(E) 2-2 | 2-6 | 10 |
| CRT(E) 2-13 | 2-26 | 15 | CRT(E) 2-7 | 2-18 | 15 |

| Alcohols (except for methanol, aldehydes, ketones 2) | | | ● | | ● |

1) Available on request.

2) Titanium is susceptible to stress corrosion cracking (SSC) in methanol
and should not be used with methanol.

2. Selection and sizing

Selection of pumps

Selection of pumps should be based on these parameters:

- the duty point of the pump (see page 8)
- dimensional data such as pressure loss as a result of height differences, friction loss in the pipework, pump efficiency (see page 8)
- pump materials (see page 10)
- pump connections (see page 10)
- shaft seal (see page 10).

Duty point of the pump

From a duty point it is possible to select a pump on the basis of the curve charts shown in section

3. Performance curves/technical data.

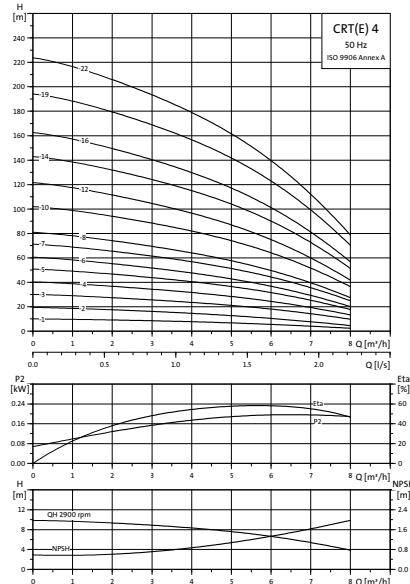

Fig. 4 Example of a curve chart

Dimensional data

When sizing a pump, take these parameters into account:

- Required flow and pressure at the draw-off point.
- Pressure loss as a result of height differences (H_{geo}).
- Friction loss in the pipework (H_f). It may be necessary to account for pressure loss in connection with long pipes, bends or valves, etc.
- Best efficiency at the estimated duty point.
- NPSH value. For calculation of the NPSH value, see section *Minimum inlet pressure - NPSH*, page 11.

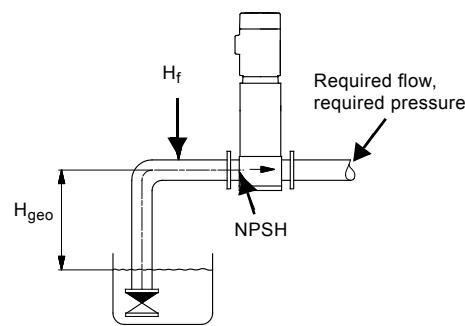

Fig. 5 Dimensional data

TM02 6711 1403

Pump efficiency

Before determining the best efficiency point, identify the operation pattern of the pump. If the pump is expected to operate at the same duty point, select a CRT(E) pump which is operating at a duty point corresponding to the best efficiency of the pump.

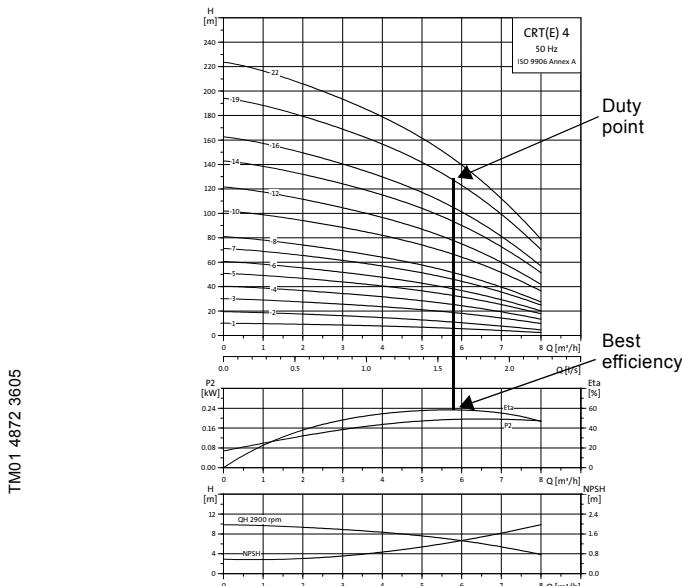

Fig. 6 Example of the duty point of a CRT(E) pump

TM01 4872 3605

As the pump is sized on the basis of the highest possible flow, it is important always to have the duty point to the right on the efficiency curve (η_a) in order to keep the efficiency high when the flow drops.

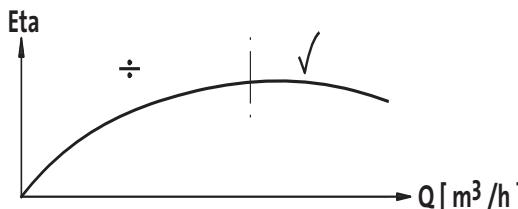

Fig. 7 Best efficiency

TM00 9190 1303

CRT, CRTE

Normally, CRTE pumps are used in applications characterised by a variable flow. Consequently, it is not possible to select a pump that is constantly operating at optimum efficiency.

In order to achieve optimum operating economy, the pump should be selected on the basis of the following criteria:

- The max. duty point required should be as close as possible to the QH curve of the pump.
- The flow rate at the duty point required should be close to the optimum efficiency (η_a) for most operating hours.

Between the min. and max. performance curves, E-pumps have an infinite number of performance curves, each representing a specific speed. Therefore, it may not be possible to select a duty point close to the 100 % curve.

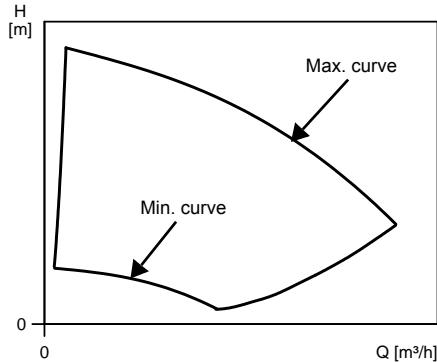

Fig. 8 Min. and max. performance curves

In situations where it is not possible to select a duty point close to the 100 % curve, the below affinity equations can be used. The head (H), the flow (Q) and the input power (P) are all the appropriate variables for the motor speed (n).

Note:

The approximated formulas apply on condition that the system characteristic remains unchanged for n_n and n_x and that it is based on the formula $H = k \times Q^2$ where k is a constant.

The power equation implies that the pump efficiency is unchanged at the two speeds. In practice, this is not quite correct.

To obtain a precise calculation of the power savings resulting from a reduction of pump speed, take into account the efficiencies of the frequency converter and the motor.

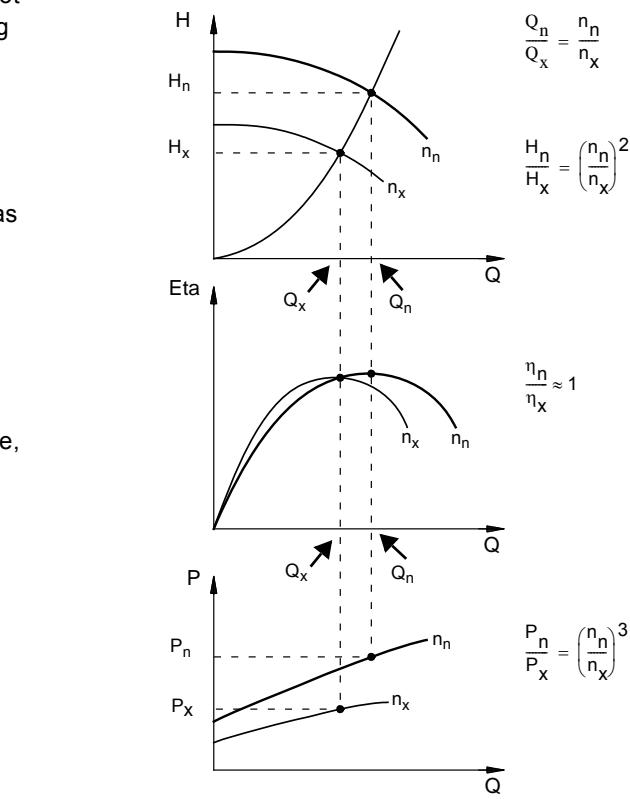

Fig. 9 Affinity equations

Legend

| | |
|----------|--|
| H_n | Rated head in metres. |
| H_x | Actual head in metres. |
| Q_n | Rated flow rate in m^3/h . |
| Q_x | Actual flow rate in m^3/h . |
| n_n | Rated motor speed in min^{-1} ($n_n = 2900 min^{-1}$). |
| n_x | Actual motor speed in min^{-1} . |
| η_n | Rated efficiency in %. |
| η_x | Actual efficiency in %. |

WinCAPS and WebCAPS

WinCAPS and WebCAPS are both selection programmes offered by Grundfos.

The two programmes make it possible to calculate the specific duty point and energy consumption of a CRTE pump.

By entering the dimensional data of the pump, WinCAPS and WebCAPS can calculate the exact duty point and energy consumption.

For further information, see section 7. *Further product documentation*.

Pump material

Select material variant on the basis of the liquid to be pumped.

Pump connections

Selection of pump connection depends on the rated pressure and pipework. To meet any requirement, Grundfos offers flexible connections such as:

- DIN flange - on request
- PJE coupling.

Shaft seal

As standard, the CRT(E) range is fitted with a Grundfos type A shaft seal suitable for the most common applications.

In service situations, Grundfos type A shaft seals can be replaced without removing the pump head.

These three key parameters must be taken into account when selecting the shaft seal:

- type of pumped liquid
- liquid temperature
- maximum pressure.

Operating pressure and inlet pressure

Do not exceed the limit values stated on page 6 for these pressures:

- maximum operating pressure
- maximum inlet pressure.

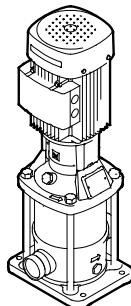

Fig. 10 CRT pump

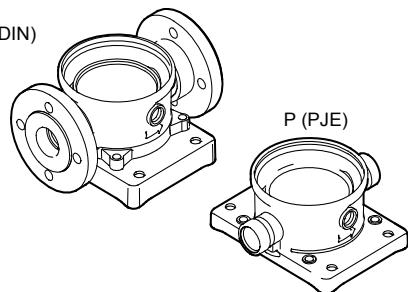

Fig. 11 Pump connections

TM02 7185 2703

TM02 7438 3403

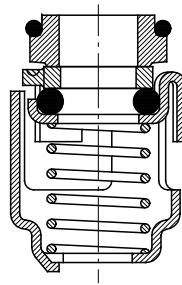

Fig. 12 Shaft seal

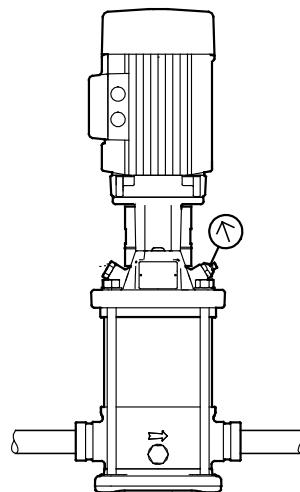

Fig. 13 Inlet and operating pressures

TM00 2581 4593

TM02 7440 3403

Minimum inlet pressure - NPSH

Calculation of the inlet pressure "H" is recommended in these situations:

- The liquid temperature is high.
- The flow is significantly higher than the rated flow.
- Water is drawn from depths.
- Water is drawn through long pipes.
- Inlet conditions are poor.

To avoid cavitation, make sure that there is a minimum pressure on the suction side of the pump.

The maximum suction lift "H" in metres head can be calculated as follows:

$$H = p_b \times 10.2 - \text{NPSH} - H_f - H_v - H_s$$

p_b = Barometric pressure in bar.

p_b = (Barometric pressure can be set to 1 bar).
In closed systems, p_b indicates the system pressure in bar.

NPSH = Net Positive Suction Head in metres head.

NPSH = (To be read from the NPSH curve at the highest flow the pump will be delivering.)

H_f = Friction loss in suction pipe in metres head.

H_f = (At the highest flow the pump will be delivering.)

H_v = Vapour pressure in metres head.

H_v = (To be read from the vapour pressure scale.
 H_v depends on the liquid temperature t_m .)

H_s = Safety margin = minimum 0.5 metres head.

If the calculated "H" is positive, the pump can operate at a suction lift of maximum "H" metres head.

If the calculated "H" is negative, an inlet pressure of minimum "H" metres head is required.

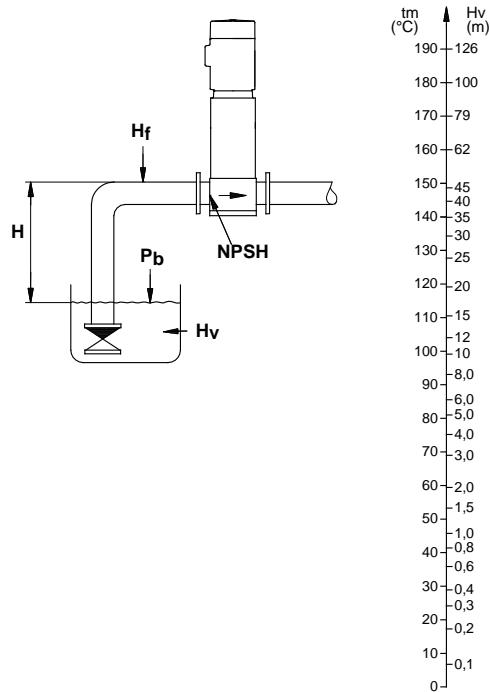

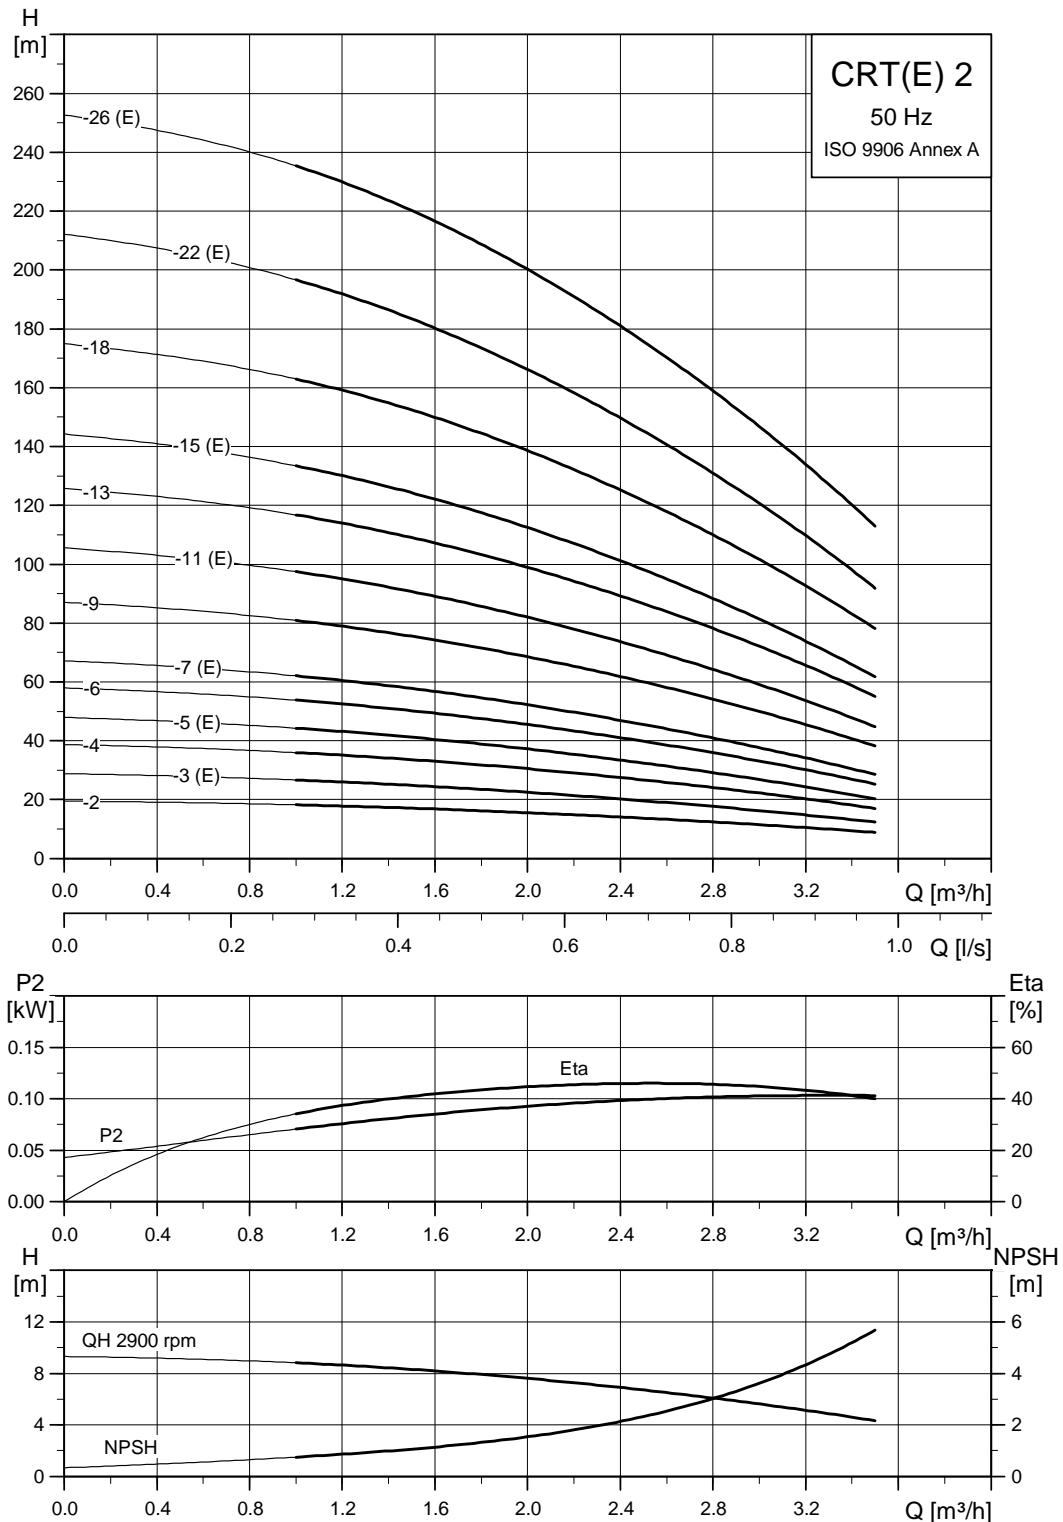

Fig. 14 Minimum inlet pressure, NPSH

Note: To avoid cavitation, never select a pump with a duty point too far to the right on the NPSH curve.

Always check the NPSH value of the pump at the highest possible flow.

* Pumps are normally fitted with single-phase MGE motors. Previous dimensions tables show pumps with single-phase MGE motors.

5. Accessories

Pipe connection

PJE couplings for CRN(E)

Materials in contact with the pumped liquid are made of titanium and rubber.

A set consists of two coupling halves (Victaulic type 77), one gasket, one pipe stub (for welding or threaded), bolts and nuts.

| Coupling | Pump type | Socket | PN | Pipe connection | Number of coupling sets needed | Product number | |
|---|---------------------------|-------------|----|-----------------|--------------------------------|----------------|--------|
| | | | | | | EPDM | FKM |
|  | CRT(E) 2 and CRT(E) 4 | Threaded | 80 | R 1 1/4 | 2 | 415520 | 415538 |
| | | For welding | 80 | DN 32 | 2 | 415521 | 415539 |
| | | Threaded | 70 | R 2 | 2 | 425935 | 425951 |
|  | CRT(E) 8 and CRT(E) 16 | For welding | 70 | DN 50 | 2 | 425934 | 425952 |
| | | | | | | | |

TM0038881094

6. Variants

The variants are available on request.

Although the Grundfos CRT(E) product range offers a number of pumps for different applications, customers require specific pump solutions to satisfy their needs. See the Grundfos CR "Custom-built pumps" catalogue.

Below please find the range of options available for customising the CRT(E) pumps to meet the customers' demands.

Contact Grundfos for further information or for requests other than the ones mentioned below.

Motors

| Variant | Description |
|--|--|
| ATEX-approved motor | For operation in hazardous atmospheres, explosion-proof or dust-ignition-proof motors may be required. |
| Motor with anti-condensation heating unit | For operation in humid environments motors with built-in anti-condensation heating unit may be required. |
| Motor with thermal protection | Grundfos offers motors with built-in bimetallic thermal switches or temperature-controlled PTC sensors (thermistors) incorporated in the motor windings. |
| Oversize motor | Ambient temperatures above 40 °C or installation at altitudes of more than 1000 metres above sea level require the use of an oversize motor (i.e. derating). |
| 4-pole motor | Grundfos offers 4-pole standard motors. |

Shaft seals

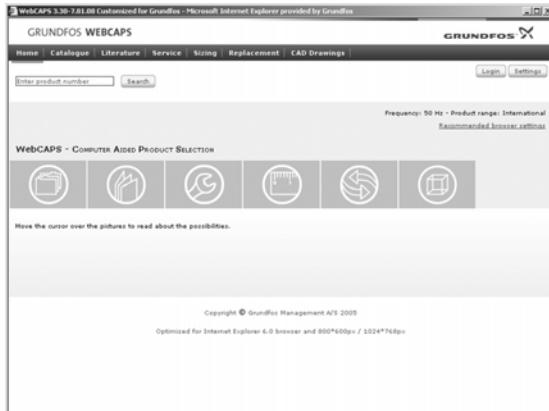

| Variant | Description |
|------------------------------------|--|
| Shaft seal with FFKM O-ring | Shaft seals with FFKM O-ring are recommended for applications where the pumped liquid may damage the standard O-ring material. |
| Shaft seal with SiC/SiC | Grundfos offers shaft seals with silicon carbide/silicon carbide (SiC/SiC). |

Pumps

| Variant | Description |
|----------------------------------|---|
| Horizontally mounted pump | For safety or height reasons, certain applications, for instance on ships, require the pump to be mounted in the horizontal position. For easy installation the pump is fitted with brackets that support motor and pump. |
| Pump with bearing flange | The bearing flange is suitable for applications where the inlet pressure is higher than the maximum pressure recommended. The bearing flange increases the life of motor bearings. Recommended for standard motors. |
| Belt-driven pumps | Belt-driven pumps designed to operate in places with limited space or where no electrical power is available. |

7. Further product documentation

WebCAPS

WebCAPS is a **Web-based Computer Aided Product Selection** program available on www.grundfos.com. WebCAPS contains detailed information on more than 220,000 Grundfos products in more than 30 languages.

Information in WebCAPS is divided into six sections:

- Catalogue
- Literature
- Service
- Sizing
- Replacement
- CAD drawings.

This screenshot shows the 'Catalogue' section of WebCAPS. On the left, there's a search interface with fields for 'Search Criteria' like 'Product name', 'Phase', 'Voltage', and 'Shaft seal'. On the right, a table lists various pump models with their details. Below the table is a graph showing the relationship between flow rate (Q) and head (H) for a specific pump model.

Catalogue

Based on fields of application and pump types, this section contains the following:

- technical data
- curves (QH, Eta, P1, P2, etc.) which can be adapted to the density and viscosity of the pumped liquid and show the number of pumps in operation
- product photos
- dimensional drawings
- wiring diagrams
- quotation texts, etc.

This screenshot shows the 'Literature' section of WebCAPS. It displays a table of literature items, each with a title, description, language, and type. To the right, there's a large image of a vertical multistage centrifugal pump.

Literature

This section contains all the latest documents of a given pump, such as

- data booklets
- installation and operating instructions
- service documentation, such as Service kit catalogue and Service kit instructions
- quick guides
- product brochures.

This screenshot shows the 'Service' section of WebCAPS. It features a search interface and a table of service parts. To the right, there's a detailed exploded view diagram of a pump, showing various components like the coupling, shaft, and bearings.

Service

This section contains an easy-to-use interactive service catalogue. Here you can find and identify service parts of both existing and discontinued Grundfos pumps.

Furthermore, the section contains service videos showing you how to replace service parts.

WinCAPS

Fig. 15 WinCAPS CD-ROM

Sizing

This section is based on different fields of application and installation examples and gives easy step-by-step instructions in how to size a product:

- Select the most suitable and efficient pump for your installation
- Carry out advanced calculations based on energy consumption, payback periods, load profiles, life cycle costs, etc.
- Analyse your selected pump via the built-in life cycle cost tool
- Determine the flow velocity in wastewater applications, etc.

Replacement

In this section you find a guide to selecting and comparing replacement data of an installed pump in order to replace the pump with a more efficient Grundfos pump.

The section contains replacement data of a wide range of pumps produced by other manufacturers than Grundfos.

Based on an easy step-by-step guide, you can compare Grundfos pumps with the one you have installed on your site. When you have specified the installed pump, the guide will suggest a number of Grundfos pumps which can improve both comfort and efficiency.

CAD drawings

In this section, it is possible to download 2-dimensional (2D) and 3-dimensional (3D) CAD drawings of most Grundfos pumps.

These formats are available in WebCAPS:

2-dimensional drawings:

- .dxf, wireframe drawings
- .dwg, wireframe drawings

3-dimensional drawings:

- .dwg, wireframe drawings (without surfaces)
- .stp, solid drawings (with surfaces)
- .eprt, E-drawings.

WinCAPS is a **Windows-based Computer Aided Product Selection** program containing detailed information on more than 220,000 Grundfos products in more than 30 languages.

The program contains the same features and functions as WebCAPS, but is an ideal solution if no internet connection is available.

WinCAPS is available on CD-ROM and updated once a year.

Subject to alterations.
